INSTITUTIONAL BREAKOUT PACKET

CONFIDENTIAL UNDER NDA

Name (optional): _____

Background (one line): _____

_____

WHY YOU'RE IN THIS BREAKOUT

You're being asked these questions because of your experience running programs and coaching at the next level. We are not looking for endorsement. We're looking for what we are missing, what would not work, and what we are getting wrong. Write as much or as little as you want. The note-taker will capture the discussion, but your written notes give us signal we would otherwise miss.

THE FORMAT

Five questions, ~9 minutes each. One question per page. A final page for anything we did not ask but should have. The artifact you'll review at Question 4 is real output from a real athlete (anonymized). One of two athletes featured today.

QUESTION 1 — PAST STATE

When you think about your athletes' mental performance — confidence under pressure, recovery from setbacks, focus, identity through adversity — what was your program doing about it?

_____
_____
_____
_____

What worked?

_____
_____
_____
_____

What did not?

_____
_____
_____
_____

QUESTION 2 — FAILURE-MOMENT EXTRACTION

Walk us through the last time something went wrong with an athlete on the mental side — pressure response, slump, locker-room thing, motivation collapse.

The situation:

_____
_____
_____
_____

What you actually did:

_____
_____
_____
_____

What you wish you could have done:

_____
_____
_____
_____

QUESTION 3 — STRESS-TEST OUR ASSUMPTION

Our working assumption: most programs spinning up mental performance solutions land on sporadic meetings, on-staff coaches, or guest speakers — and those resources don't translate into anything athletes use day-to-day.

[ ] True [ ] Untrue [ ] Partially true

Why:

_____
_____
_____
_____
_____
_____

What programs you respect are actually doing that works:

_____
_____
_____
_____
_____
_____

QUESTION 4 — REACT TO ATHLETE A

You've reviewed Athlete A's coaching insights, her Wk7 failure-recovery output, and her Wk12 peak output.

What does this 12-week arc tell you that your coaching tools didn't?

_____
_____
_____
_____
_____
_____
_____

What would you want to know about her that this doesn't show you?

_____
_____
_____
_____
_____
_____

QUESTION 5 — KILLER TEST

(a) How would something like this make you win more — concretely?

_____
_____
_____
_____
_____
_____

(b) What is the ONE piece of this that would have to be undeniable before you would take it to your AD for budget approval?

_____
_____
_____
_____
_____
_____

ANYTHING ELSE

What did we not ask that we should have?

_____
_____
_____
_____
_____
_____
_____

Anything else for the record:

_____
_____
_____
_____
_____
_____
_____

Thank you.

"VirtusFocus" Focus Group

May 9, 2026

INSTITUTIONAL ARTIFACT PACKET

WHAT'S IN THIS PACKET

Real coaching-staff output from two anonymized athletes, the system's baseline snapshot showing one athlete's Day 1 starting point, and a sample institutional team-level dashboard. These are not mockups. This is what a coaching staff actually receives in real deployment.

Reference these during Question 4 of your breakout.

ATHLETES FEATURED

Athlete A — D2 women's softball, outfielder. 12-week coaching arc.
Athlete B — D2 men's track and field, throws. 10-week coaching arc, retiring after PSAC championship.

CONTENTS

1. Athlete A — Baseline Snapshot
   Day 1 starting point
2. Athlete A — 12-week progression visual
3. Athlete A — Week 7 Coach Insight
   first competitive failure week
4. Athlete A — Week 12 Coach Insight
   peak / phase-sustained
5. Athlete A — Week 12 Coaching Message
   athlete-facing cross-audience reference
6. Athlete A — Week 12 Parent Coaching Message
   parent-facing cross-audience reference
7. Athlete B — 10-week progression visual
8. Athlete B — Week 10 Coach Insight
   final week + phase advancement
9. Sample Team Snapshot
   institutional aggregate dashboard

All material confidential under NDA. Printed copies are collected at end of session; digital copies are available on request and delivered as personalized watermarked PDFs.

ATHLETE A - BASELINE PROFILE

Sport: Division II Women's Softball Position: Outfielder Years Competing: 12 Mental Game Rating: 6/10 (athlete self-assessed at intake)

---

1. PERFORMANCE CONTEXT

Athlete A is a softball outfielder at the Division II collegiate level, with approximately 12 years in the sport. She is preparing for the upcoming competitive season and is focused on improving both physical readiness (speed, strength, mobility) and mental consistency. Her current self-assessed mental performance rating is 6/10, suggesting moderate confidence with clear opportunity for improvement in performance stability and response to mistakes.

---

2. PRIMARY STATED GOALS

Outcome Goals:

- Earn a strong position or role on the team for the upcoming season.
- Enter the next season physically stronger, faster, more mobile, and more confident.

Behavior Goals:

- Maintain confidence in her abilities during competition.
- Improve consistency in her mental approach.
- Learn to accept mistakes and move forward without dwelling on them.

---

3. MOTIVATION DRIVERS

Internal Drivers:

- Personal improvement and self-development.
- Desire to build stronger confidence and mental consistency.

External Drivers:

- Responsibility to contribute positively to the team.
- Desire not to let teammates or herself down.

Identity Language Detected:

- Values being a confident and reliable competitor.
- Expresses responsibility toward team performance.

---

4. KNOWN DERAILERS

Primary Derailers:

- Loss of confidence during competition.
- Difficulty letting go of mistakes or negative outcomes.
- Inconsistent motivation when performance declines.

Derailer Context:

- Mistakes or perceived failures during competition appear to disrupt belief and focus.

---

5. CONFIDENCE PATTERN

Confidence Type: Outcome-reactive

Description: Her confidence appears tied to performance outcomes. Successful moments likely reinforce belief, while mistakes or perceived failures can quickly reduce confidence. Stabilizing confidence independent of immediate outcomes will be a key area of development.

---

6. IDENTITY FRICTION

Friction Points:

- Desires to stay confident during competition but reports difficulty maintaining belief after mistakes.
- Wants to perform reliably for her team but places high pressure on herself in important moments.

---

7. STRESS / TRIGGER PROFILE

Competitive Pressure:

- Big moments create internal pressure to succeed.

Primary Trigger:

- Fear of letting teammates or herself down.

Behavioral Response Pattern:

- Increased internal pressure before key moments.
- Mistakes can trigger reduced confidence and overthinking.

External Stressors:

- Insufficient data provided at intake.

8. INITIAL COACHING EMPHASIS

Coaching Priorities:

- Develop a consistent reset routine after mistakes.
- Reinforce confidence anchored to preparation rather than outcomes.
- Build structured focus cues for high-pressure moments.

Baseline Anchors (locked, traced through every weekly output):

Identity Claim: Wants to stay confident in her ability during competition.

Hinge Habit: Immediate reset and refocus after mistakes.

Primary Derailer: Loss of confidence following errors or perceived failure.

Why It Matters: Stable confidence supports consistent performance and increases her ability to earn and maintain a strong team role.

Exact Phrase (verbatim from intake): "I need to make sure I succeed and if I don't I will let myself and the team down."

9. INITIAL GROWTH PHASE

Growth Phase: Developing

Justification: She demonstrates strong commitment to improving her mindset and awareness of areas she wants to strengthen. However, her confidence currently fluctuates with performance outcomes, indicating that consistent confidence regulation and response to mistakes are still developing.

CONFIDENTIAL UNDER NDA

ATHLETE A — D2 WOMEN'S SOFTBALL, OUTFIELDER

12-Week Coaching Arc | Athlete A — Progression Visual | Jan 12 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 5)

WEEKLY TIER

Growth across all 12 weeks. 82 of 84 days = Win. Gradient = building momentum across the arc.

KEY INFLECTION POINTS

Wk 1-2 Outcome-reactive baseline at intake. Preparation-energized as program starts.

Wk 3 HIGH EI. Derailer activated, structure held. Brief disappointment → reset same-week. Hinge habit operating as designed.

Wk 4 Action-proven. First RQS=4 in program (deepest reflection quality available). One competitive chance → breakthrough at-bat:

> *"the one chance I got, I did something with."*

Wk 5 ↑ PHASE ADVANCEMENT to Consistent. Identity-embedded statement in journal:

> *"If I'm given a chance, use it well."*

Wk 6 First competitive validation: pinch-hit single, first collegiate start. NC composure held.

Wk 7 FIRST COMPETITIVE FAILURE — pinch-hit strikeout. Reset language by Wednesday. Failure-resilient.

Wk 8 Agency-driven. First self-directed development initiative — defensive practice with Kabine on her own time. Attention-management awareness:

> *"separate softball from my life."*

Wk 9 First direct coach advocacy. Second competitive failure → same-day composure.

Wk 10 Acceptance-oriented. Zero playing time.

> *"I think I'm just at the point where I don't even care to play anymore... I just want everyone to do well."*

Wk 11 Re-engaged inside acceptance. First Neutral days in 70-day Win streak (challenge-writing, not behavioral disengagement). First specific physical controllable named:

> *"running on toes, not backs of feet."*

Wk 12 ARTICULATED PARADOX COMPOSURE — peak moment. Wednesday breakthrough:

> *"fast asf today tbh, got all my mf bunts down."*
>
> *"I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well."*

INTAKE → CURRENT

FROM: outcome-dependent confidence. TO: outcome-INDEPENDENT, self-authored recognition.

The same athlete who entered the program needing external validation to feel confident is now naming her own performance and sustaining composure when external recognition does not arrive.

Athlete: Grace Kindel Week: 2026-03-09 to 2026-03-15 Report Type: Weekly Performance Insight Classification: Informational Only

"These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

---

1) WEEKLY PERFORMANCE CLASSIFICATION

Weekly Tier: Growth Trend Direction: → Stable

This week reflects a continued Growth classification with stable directional momentum. Behavioral execution indicators remained at maximum across a week that included a competitive setback. Seventh consecutive Growth-tier week.

---

2) CONSISTENCY SIGNAL

Status: Stable

Behavioral execution patterns maintained stable positive alignment throughout the reporting period, extending the program-long streak to forty-nine consecutive Win days across seven weeks. No variability indicators detected.

---

3) FOCUS DISTRIBUTION (BULLSEYE TREND)

Primary Focus Ring: Center-Dominant

Sustained center-dominant focus distribution across the reporting period. No noise fixation detected.

---

4) RECOMMITMENT & RESPONSE SIGNAL

Recommitment Strength: Not Applicable

Response Stability: Not Applicable

No adverse execution events required recommitment during this reporting period. Response stability indicators remain not applicable due to sustained positive execution across the full reporting window.

---

5) CONFIDENCE MOMENTUM (DIRECTIONAL ONLY)

Trend: → Building

Confidence momentum indicators show a continued building trend, reinforced by successful adversity processing this period. A competitive setback was processed and resolved within forty-eight hours without disruption to behavioral execution patterns. Composure indicators sustained throughout the reporting period.

---

6) STRESS LOAD INDICATOR (BAND-BASED)

Band: Moderate

Overall stress load indicators shifted to the moderate band for this reporting period, reflecting competitive-season demands and the competitive setback early in the period.

---

7) GROWTH PHASE STATUS

Current Phase: Consistent Movement: → Stable

Developmental indicators remain within the Consistent phase. The competitive setback this period was processed through established behavioral mechanisms without phase-level regression indicators. Execution and controllable alignment continue to support phase stability.

---

8) KEY PERFORMANCE SIGNAL (WEEKLY PRIORITY)

Primary Development Signal This Week: Post-Setback Recovery Quality

Current development indicators center on the processing and resolution of the first competitive disappointment in the program. Behavioral response patterns demonstrated functional adversity processing: brief acknowledgment followed by active reset within forty-eight hours, with no disruption to daily execution. This represents the first direct test of adversity-response mechanisms under competitive conditions, producing a positive developmental signal.

---

9) COACH CONTEXT CUE

Recognize the post-setback recovery pattern. The competitive disappointment was processed and resolved without behavioral execution disruption. Daily execution sustained at maximum throughout the reporting period.

---

10) COMPOSITE READINESS SIGNAL

Readiness Level: → Steady (Yellow)

Performance readiness indicators reflect sustained routine stability and continued behavioral execution, moderated by elevated stress load indicators from the competitive setback and continued competition-season demands. Overall pattern supports steady readiness.

Athlete: Grace Kindel Week: 2026-04-20 to 2026-04-26 Report Type: Weekly Performance Insight Classification: Informational Only

"These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

---

1) WEEKLY PERFORMANCE CLASSIFICATION

Weekly Tier: Growth Trend Direction: → Stable

This week reflects a continued Growth classification with stable directional momentum. Twelfth consecutive Growth-tier week. Daily execution recovered fully to seven Win days following the prior reporting period's first daily-standard deviations. Emotional intensity indicators remained within the Low band.

---

2) CONSISTENCY SIGNAL

Status: Stable

Behavioral execution patterns returned to full daily-standard alignment after the prior period's two-day deviation. Twelve consecutive weeks of Growth-tier classification. Daily Win count returned to maximum (seven of seven). Eighty-two Win days across eighty-four program days to date.

---

3) FOCUS DISTRIBUTION (BULLSEYE TREND)

Primary Focus Ring: Center-Dominant

Sustained center-dominant focus distribution across the reporting period. No noise fixation detected. Consistent composed focus profile across the most recent reporting periods.

---

4) RECOMMITMENT & RESPONSE SIGNAL

Recommitment Strength: Not Applicable

Response Stability: Not Applicable

No adverse execution events required recommitment during this reporting period. Daily Win execution sustained across the full week without deviation. Response stability indicators remain not applicable for the sustained execution trajectory across the full program history.

---

5) CONFIDENCE MOMENTUM (DIRECTIONAL ONLY)

Trend: ↑ Building

Confidence momentum indicators show forward movement this reporting period through preparation-linked recognition. Confidence framing now includes both preparation-linked recognition and outcome-independent maintenance, indicating progression from prior-period forward-facing readiness signals to current-period self-recognition without external validation requirement.

---

6) STRESS LOAD INDICATOR (BAND-BASED)

Band: Low

Stress load indicators remained within the Low band. No elevated stress signals detected this reporting period.

---

7) GROWTH PHASE STATUS

Current Phase: Consistent Movement: → Stable

Developmental indicators remain within the Consistent phase with stable maintenance. Primary execution indicators continue to meet Consistent-phase criteria (sustained Growth tier classification, stable positive consistency profile, behavioral composure, full daily-standard execution recovery). No regression threshold criteria met.

---

8) KEY PERFORMANCE SIGNAL (WEEKLY PRIORITY)

Primary Development Signal This Week: Preparation-Linked Self-Recognition Emergence

Current development indicators center on the emergence of process-linked self-recognition without external validation requirement. Daily execution fully recovered to seven Win days. The combination of sustained execution, stable composed focus distribution, and confidence framing that integrates preparation-linked recognition with outcome-independent maintenance indicates mature integration of process-anchored confidence as a concurrent active indicator.

---

9) COACH CONTEXT CUE

Daily-standard execution recovered fully (seven Win days) following the prior period's two daily-standard deviations. Stress load indicators remained within the Low band. End-of-period goal-setting indicator showed engagement with the coaching layer, which the assigned micro-commitment addresses directly. Two competitive events scheduled for the

upcoming reporting period (likely final regular-season events). The overall pattern shows mature integration of process-linked confidence and outcome-independent execution maintenance.

---

10) COMPOSITE READINESS SIGNAL

Readiness Level: ↑ Positive (Green)

Performance readiness indicators reflect full daily-standard execution recovery (seven Win days), preparation-linked self-recognition emergence, sustained Low stress-load classification, and forward-aligned alignment status. The combination produces a Positive readiness classification. Two additional competitive events scheduled for the upcoming reporting period.

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Grace Kindel | Week 12 | April 20-26, 2026 ----------

Grace,

Wednesday is the week. You wrote, "fast asf today tbh, got all my mf bunts down." That's the first time in this program you've named your own work that way without me asking the question first. You said you could feel it. You said you knew the people who needed to see it were watching.

Then by Sunday you wrote the whole thing out: "I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well." That sentence holds the last six weeks in one place. The work was visible. The coaches saw. The outcome didn't change. You kept going anyway.

That last part is what the program has been building toward. When you walked in here, the goal you wrote for yourself was staying confident in your ability during competition. Back then, confidence came from being on the field. This week it came from naming your own work, hearing the silence after, and continuing anyway. That's confidence that doesn't need the field to confirm it, Grace.

The recovery from last weekend's two days showed up too. You said you were going to sit with the mindset emails each day. You did. Every day this week paired a prompt with something specific you were working on. That's the commitment we set last week, run for the full seven.

You ended the recap with "idk at this point give me something." Fair. Two games left.

YOUR ACTION: BEFORE FRIDAY AND SATURDAY

Before warmup begins on Friday and Saturday, write down one specific physical cue you're going to execute that day. A hitting cue. A throwing target. A footwork drill. The Wednesday standard, applied to one thing per game. After the game, write one sentence on how it showed up. Two games, two cues, two sentences. Whether you play or not, those reps are yours.

The work is yours, Grace. Run the last two with it.

Coach Arron

NEXT WEEK FOCUS QUESTION

Wednesday you did the work and the people who needed to see it did. The result still didn't change. What's the part of that work that's still worth running through the final two games?

VIRTUSFOCUS: PARENT COACHING MESSAGE

Grace | Week 12 | April 20-26, 2026 ----------

WEEKLY CONTEXT

Grace had a strong week. Her daily routine held all seven days, and she's continuing to build the kind of consistency that has carried her through a long stretch of the season. Late-season rhythm at this point is steady. She's operating at the level that twelve weeks of work has produced.

WHAT STOOD OUT

What stood out this week is that Grace recognized her own work in real time. She named the quality of what she was doing without needing to be asked, and she stayed composed when the recognition didn't change the outcome. That self-awareness about her own preparation is a real shift, the kind that takes weeks of practice to develop.

WHAT'S AHEAD

Two games remain on the schedule next week. The coaching focus heading into them is consistency of preparation, carrying the same standard into the final games she's been carrying through practice. End-of-season closing weeks. Whatever the lineup looks like, the work she does to prepare is hers.

HOW YOU CAN SUPPORT

Grace is at a point in her development where she's running her own preparation well. Encouraging the process and being available if she wants to talk about how things are going is the most helpful support right now. The closing weeks of any season carry their own weight, and your steady presence is the right kind of support for that.

Coach Arron ----------

ATHLETE B — D2 MEN'S TRACK AND FIELD THROWS

10-Week Coaching Arc | Athlete B — Progression Visual | Feb 2 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 10 — final week of athlete's collegiate career after 16 years in T&F)

WEEKLY TIER (1 Mixed week, 9 Growth)

9 of 10 weeks Growth. Wk 8 = first Mixed week of program (Mt Union setback under severe weather + facility loss). 60 Win / 9 Neutral / 2 Missed across 70 program days.

KEY INFLECTION POINTS

Wk 1 Illness recovery + approach-framed re-engagement. Returns to competition. Category-only WTD scoring.

Wk 2 Near-PR Shotput (16.44m vs 16.70m career best) at highest-level meet of season. Solo at the meet — composure held in isolation.

Wk 3 First Gold Streak. Won both events. Identity-level achievement.

Wk 4 PSAC championship retrospective after 2.5-week gap. MODERATE EI. Partially Aligned. Multi-domain overload derailer activated under championship pressure. Outdoor transition begins.

Wk 5 SHIPPENSBURG BREAKTHROUGH — best outdoor opener of career. All PSAC auto-qualifiers hit. 7/7 Win — second Gold Streak. PSAC lesson named in athlete's own words:

> *"properly planned, not spontaneous."*

Wk 6 First Missed day in 42 program days (Friday illness). CMU meet cancelled. Only 1 practice in 7 days. Moderate recommitment (lifted Saturday while sick). Reframed the disruption:

> *"a blessing"*

Wk 7 Easter break recovery week executed to stated intention. 7/7 Win — third Gold Streak. Bullseye center-ring expanded 1 → 6 items. Achievement internal:

> *"mental stability and equilibrium."*

Wk 8 FIRST MIXED WEEK in program. Mt Union 2-day meet under severe weather. Marks below standard across all three events. Practice facility permanently lost. Strongest negative language to date — but weekday execution held, athlete competed through.

Wk 9 SLIPPERY ROCK PROGRAM-BEST. Outdoor shot put school record (over 16m). New Discus PR. 7/7 Win — fourth Gold Streak. Preparation-quality system VALIDATED A SECOND TIME, this time under MORE constrained conditions. Athlete's own summary:

> *"best meet of the season."*

Wk 10 ↑ PHASE ADVANCEMENT to Consistent — final week of collegiate career. Two real-time strategic decisions named in athlete's own voice:

> *"I didn't need to be there but I chose to to support my team and to keep my competition readiness up."*
>
> *"leave colligate sports with gratitude, reverence, and peace."*

INTAKE → CURRENT

FROM: multi-domain overload derailer. TO: preparation-system mastery across three timescales — retrospective lesson extraction (Wk 4), prospective design (Wks 5, 9), in-competition real-time decisions (Wk 10).

VIRTUSFOCUS

Athlete: Angelo Allen Week: April 20-26, 2026 Report Type: Weekly Performance Insight Classification: Informational Only

These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions.

1. WEEKLY PERFORMANCE CLASSIFICATION

Weekly Tier: Growth Trend Direction: → Stable

This week reflects sustained Growth-tier execution at the floor of the productive scorecard threshold (5 productive days out of 7). Behavioral execution held across academic, vocational, and athletic domains, with consecutive-week competition execution following the prior week's program-best performance. This period's competition produced wins in two of three contested events with a deliberate mid-competition decision to scratch the third event for championship preservation.

2. CONSISTENCY SIGNAL

Status: Stable Positive

Behavioral execution remained stable across the second consecutive week post-prior-disruption. No Missed days, productive distribution sustained, no recommitment events triggered. Cross-week consistency from the prior week is fully maintained, indicating execution stability is not contingent on environmental resolution and now demonstrates back-to-back consecutive-week sustainability.

3. FOCUS DISTRIBUTION (BULLSEYE TREND)

Primary Focus Ring: Center-Dominant

Sustained center-dominant focus distribution for the fourth consecutive period. Consistent focus profile maintained across the recent reporting periods. No noise fixation detected.

4. RECOMMITMENT AND RESPONSE SIGNAL

Recommitment Strength: Not Applicable

Response Stability: Consistent Response Pattern

No recommitment events occurred this week as no Missed days were recorded. Cross-week recovery from the prior disruption window is now sustained through two consecutive weeks. Response stability indicators remained consistent with the program's strongest patterns.

5. CONFIDENCE MOMENTUM (DIRECTIONAL ONLY)

Trend: ↑ Building

Confidence indicators show continued positive directional movement, driven by preparation ownership and consecutive-week competitive execution. Confidence framing operates at the in-competition real-time level. Confidence remains preparation-linked rather than outcome-linked.

6. STRESS LOAD INDICATOR

Band: Low

Overall stress indicators remained within the low range. Self-regulation signals show stable composure across a back-to-back competition window. Forward-looking pattern indicators are process-oriented heading into the championship week.

7. GROWTH PHASE STATUS

Current Phase: Consistent Movement: ↑ Advancing

The athlete has advanced from Developing to Consistent. Phase advancement criteria are met: rolling 4-week productive-day rate clears the qualifying threshold for the first time in the program, paired with the second consecutive week of full alignment and stable positive distribution. Advancement occurs in the final program week before the athlete's last collegiate competition. Continued phase classification beyond this window is not applicable as the athlete is retiring from collegiate competition.

8. KEY PERFORMANCE SIGNAL (WEEKLY PRIORITY)

Primary Development Signal This Week: In-Competition Strategic Decision-Making

The most relevant development marker this week is the operationalization of the preparation system at the in-competition real-time level. Two strategic decisions occurred during a single competition this period (the meet-attendance decision and the mid-competition event-scratch decision), with causal reasoning patterns observable in both. The same decision pattern that produced the prior week's program-best competitive output is now operating one timescale earlier and one decision deeper. The system has demonstrated repeatability across three operating timescales: retrospective lesson extraction, prospective preparation design, and in-competition real-time adjustment.

9. COACH CONTEXT CUE

Reinforce the pattern of strategic decision-making at the in-competition real-time level. The next scheduled competition is the conference championship across three days at the same venue where the athlete's first competitive disappointment of the recorded program occurred ten weeks prior. Reinforcement should focus on the decision-making system across the three competition days rather than on outcome targets. Monitor sustainability of the decision system under championship-level stakes and across consecutive competition days. This is the final week of the athlete's collegiate career.

10. COMPOSITE READINESS SIGNAL

↑ Positive (Green)

Routine stability, controllable alignment, recommitment history, and confidence momentum all support a positive readiness signal heading into the conference championship. Execution sustained stable positive distribution across consecutive competition weeks. Preparation system now operates at three demonstrated timescales. Phase classification advancement is supported by the data through this week. Readiness is supported at multiple dimensions heading into the season-end target event.

Team: VirtusFocus Validation Program Week: Cross-Temporal Validation (Most Recent Week Per Athlete) Report Type: Weekly Team Snapshot Classification: Informational Only Athletes Included: 6

> "These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

NOTE: This is a validation snapshot using each athlete's most recent week of data. Athletes span different date ranges (May 2025 through March 2026) and represent different sports and institutions. This tests the T1-T7 aggregation format and logic, not temporal alignment. In production, all athletes on a team would share the same reporting week.

T1) PERFORMANCE DISTRIBUTION

```
Growth:  3/6  (50%)
Mixed:   3/6  (50%)
Reset:   0/6  (0%)
Directional Momentum: → Stable
```

The roster is evenly split between Growth-tier and Mixed-tier performance this period, with no athletes in Reset. All six athletes show stable directional momentum in their weekly tier trends, indicating a steady performance foundation across the program. The absence of Reset-tier athletes and the balanced Growth-Mixed distribution suggest a cohort maintaining behavioral engagement without significant regression.

T2) TEAM CONSISTENCY SIGNAL

```
Overall Status: Transitional Variability
Stable:    2/6  (33%)
Variable:  4/6  (67%)
Determination: Axis 1 (Distribution) = 67% Variable, 0%
Volatile. Axis 2 (Trend Direction) = all 6 athletes show
Stable weekly tier trends. → Transitional Variability
(>40% Variable, zero Volatile, all trends Stable).
```

Two-thirds of athletes show variable consistency patterns this period, while one-third demonstrate stable positive consistency. The variability is context-driven — athletes in variable patterns are navigating competitive transitions, structural changes, or post-competition processing. No athletes show volatile or deteriorating consistency signals.

T3) TEAM FOCUS DISTRIBUTION

```
Center-Dominant:     6/6  (100%)
Mixed Focus:         0/6  (0%)
Outer-Ring Drift:    0/6  (0%)
```

All six athletes demonstrate center-dominant controllable alignment, directing attention toward preparation, effort, and response patterns rather than external factors. This indicates strong collective focus on elements within individual control across the entire roster.

T4) TEAM RECOMMITMENT TREND

```
Strong:                  0/6  (0%)
Moderate:                0/6  (0%)
Low:                     0/6  (0%)
Not Applicable:          6/6  (100%)
```

The majority of athletes did not experience adverse execution events requiring recovery this period. A 100% Not Applicable rate indicates that the roster maintained sufficient daily engagement to avoid triggering recommitment assessment. This reflects stable behavioral patterns rather than a data gap.

T5) TEAM CONFIDENCE DIRECTION

```
Building:     1/6  (17%)
Stable:       4/6  (67%)
Rebuilding:   1/6  (17%)
Overall Trend: → Stable
```

The majority of athletes show stable confidence trajectories linked to consistent preparation patterns. One athlete demonstrates building confidence through successful preparation-to-performance transfer, while one is in a rebuilding phase following a competitive transition period. No athletes show declining or variable confidence signals.

T6) TEAM STRESS LOAD DISTRIBUTION

```
Low:       3/6  (50%)
Moderate:  3/6  (50%)
Elevated:  0/6  (0%)
```

The roster is evenly split between low and moderate stress loads, with no athletes at elevated levels. The moderate stress indicators reflect competitive schedules and developmental transitions rather than acute distress. The absence of elevated stress across the program suggests a manageable collective load.

T7) TEAM DEVELOPMENTAL DISTRIBUTION

```
Emerging:    0/6  (0%)
Developing:  5/6  (83%)
Consistent:  1/6  (17%)
Leadership:  0/6  (0%)
Team Composite Readiness Distribution:
↑ Positive (Green):    0/6  (0%)
→ Steady (Yellow):     6/6  (100%)
↓ Attention (Orange):  0/6  (0%)
```

The program is predominantly in the Developing phase, with one athlete having advanced to the Consistent phase. This distribution is expected for a cohort in an active growth cycle. All six athletes show Steady readiness indicators, reflecting a stable foundation without athletes requiring immediate attention. The uniform readiness signal indicates the cohort is collectively maintaining engagement and behavioral patterns at a sustainable level, with no athletes flagged for coaching intervention.
