D2C / ATHLETE BREAKOUT PACKET

CONFIDENTIAL UNDER NDA

Name (optional): _____

Background (one line): _____

_____

WHY YOU'RE IN THIS BREAKOUT

You're being asked these questions because you've competed at a high level, raised athletes who have, or both. We need to know what would have actually helped you or your athlete — and what would have felt like another thing to ignore. Honest answers, not polite ones. The note-taker will capture the discussion; your written notes give us signal we'd otherwise miss.

THE FORMAT

Five questions, ~9 minutes each. One question per page. A final page for anything we did not ask but should have. The artifact you'll review at Question 4 is real output from a real athlete (anonymized) — one of two athletes featured today.

QUESTION 1 — MEMORY ANCHOR

Think back to your competitive years — collegiate or high school. What's the thing your coaches and your program never gave you on the mental side that you needed?

Confidence stuff, pressure stuff, recovery from mistakes, identity stuff, the quiet stuff.

What you needed:

_____
_____
_____
_____
_____

What got in the way of you getting it:

_____
_____
_____
_____
_____

QUESTION 2 — ADOPTION-BARRIER EXTRACTION

If a tool like this had existed during your career — daily mindset prompts, weekly coaching created from your own data, parent or coach integration (your data and input stays private) — would you have actually used it? Honestly.

[ ] Yes [ ] No [ ] Depends

Why:

_____
_____
_____
_____

What would have made it sticky?

_____
_____
_____
_____
_____

What would have made it just another thing on your phone you ignore?

_____
_____
_____
_____
_____

QUESTION 3 — STRESS-TEST OUR ASSUMPTION

Our working assumption: today's athletes are either getting nothing structured around mental performance, or they're getting talks and meetings that don't stick.

[ ] True [ ] Untrue [ ] Partially true

From your kids, your athletes, your network — what have you actually seen?

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

QUESTION 4 — REACT TO GRACE'S ARC

You've reviewed Grace's coaching arc — the messages and deep dives she received over twelve weeks.

If this were your daughter, your athlete, your younger self — would you want this?

_____
_____
_____
_____

What's the strongest part?

_____
_____
_____
_____

What's the part that would feel less authentic?

_____
_____
_____
_____

QUESTION 5 — KILLER TEST

(a) If you paid for this directly, what's the monthly price ceiling? Where does it stop being worth it? $ ____ / month

_____
_____
_____
_____
_____

(b) What's the one thing that would make you cancel inside of a month?

_____
_____
_____
_____
_____
_____

ANYTHING ELSE

What did we not ask that we should have?

_____
_____
_____
_____
_____
_____
_____

Anything else for the record:

_____
_____
_____
_____
_____
_____
_____

Thank you.

"VirtusFocus" Focus Group

May 9, 2026

D2C / ATHLETE ARTIFACT PACKET

CONFIDENTIAL UNDER NDA

WHAT'S IN THIS PACKET

Real athlete-facing coaching output from three anonymized athletes, plus the system's baseline snapshot for one athlete (Day 1 starting point) and a sample team dashboard. These are the messages, deep dives, and parent-facing notes the program actually delivers. Not mockups, not summaries.

Reference these during Question 4 of your breakout.

ATHLETES FEATURED

Athlete A — D2 women's softball, outfielder. 12-week coaching arc.
Athlete B — D2 men's track and field, throws. 10-week coaching arc, retiring after PSAC championship.
Athlete C — High school wrestling. Week 1 of return arc following season-ending knee injury.

CONTENTS

1. Athlete A — Baseline Snapshot
   Day 1 starting point
2. Athlete A — 12-week progression visual
3. Athlete A — Week 7 Coaching Message
   first competitive failure
4. Athlete A — Week 12 Coaching Message
   peak moment
5. Athlete A — Week 12 Deep Dive
   full analytical depth example
6. Athlete A — Week 12 Coach Insight
   coach-facing cross-audience reference
7. Athlete A — Week 12 Parent Coaching Message
   parent-facing perspective
8. Athlete B — 10-week progression visual
9. Athlete B — Week 10 Coaching Message
   final week + phase advancement
10. Athlete C — Week 1 Parent Coaching Message
    HS-context parent exemplar
11. Sample Team Snapshot
    institutional aggregate dashboard

All material confidential under NDA. Printed copies are collected at end of session; digital copies are available on request and delivered as personalized watermarked PDFs.

ATHLETE A - BASELINE PROFILE

Sport: Division II Women's Softball Position: Outfielder Years Competing: 12 Mental Game Rating: 6/10 (athlete self-assessed at intake)

---

1. PERFORMANCE CONTEXT

Athlete A is a softball outfielder at the Division II collegiate level, with approximately 12 years in the sport. She is preparing for the upcoming competitive season and is focused on improving both physical readiness (speed, strength, mobility) and mental consistency. Her current self-assessed mental performance rating is 6/10, suggesting moderate confidence with clear opportunity for improvement in performance stability and response to mistakes.

---

2. PRIMARY STATED GOALS

Outcome Goals:

- Earn a strong position or role on the team for the upcoming season.
- Enter the next season physically stronger, faster, more mobile, and more confident.

Behavior Goals:

- Maintain confidence in her abilities during competition.
- Improve consistency in her mental approach.
- Learn to accept mistakes and move forward without dwelling on them.

---

3. MOTIVATION DRIVERS

Internal Drivers:

- Personal improvement and self-development.
- Desire to build stronger confidence and mental consistency.

External Drivers:

- Responsibility to contribute positively to the team.
- Desire not to let teammates or herself down.

Identity Language Detected:

- Values being a confident and reliable competitor.
- Expresses responsibility toward team performance.

---

4. KNOWN DERAILERS

Primary Derailers:

- Loss of confidence during competition.
- Difficulty letting go of mistakes or negative outcomes.
- Inconsistent motivation when performance declines.

Derailer Context:

- Mistakes or perceived failures during competition appear to disrupt belief and focus.

---

5. CONFIDENCE PATTERN

Confidence Type: Outcome-reactive

Description: Her confidence appears tied to performance outcomes. Successful moments likely reinforce belief, while mistakes or perceived failures can quickly reduce confidence. Stabilizing confidence independent of immediate outcomes will be a key area of development.

---

6. IDENTITY FRICTION

Friction Points:

- Desires to stay confident during competition but reports difficulty maintaining belief after mistakes.
- Wants to perform reliably for her team but places high pressure on herself in important moments.

---

7. STRESS / TRIGGER PROFILE

Competitive Pressure:

- Big moments create internal pressure to succeed.

Primary Trigger:

- Fear of letting teammates or herself down.

Behavioral Response Pattern:

- Increased internal pressure before key moments.
- Mistakes can trigger reduced confidence and overthinking.

External Stressors:

- Insufficient data provided at intake.

8. INITIAL COACHING EMPHASIS

Coaching Priorities:

- Develop a consistent reset routine after mistakes.
- Reinforce confidence anchored to preparation rather than outcomes.
- Build structured focus cues for high-pressure moments.

Baseline Anchors (locked, traced through every weekly output):

Identity Claim: Wants to stay confident in her ability during competition.

Hinge Habit: Immediate reset and refocus after mistakes.

Primary Derailer: Loss of confidence following errors or perceived failure.

Why It Matters: Stable confidence supports consistent performance and increases her ability to earn and maintain a strong team role.

Exact Phrase (verbatim from intake): "I need to make sure I succeed and if I don't I will let myself and the team down."

9. INITIAL GROWTH PHASE

Growth Phase: Developing

Justification: She demonstrates strong commitment to improving her mindset and awareness of areas she wants to strengthen. However, her confidence currently fluctuates with performance outcomes, indicating that consistent confidence regulation and response to mistakes are still developing.

CONFIDENTIAL UNDER NDA

ATHLETE A — D2 WOMEN'S SOFTBALL, OUTFIELDER

12-Week Coaching Arc | Athlete A — Progression Visual | Jan 12 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 5)

WEEKLY TIER

Growth across all 12 weeks. 82 of 84 days = Win. Gradient = building momentum across the arc.

KEY INFLECTION POINTS

Wk 1-2 Outcome-reactive baseline at intake. Preparation-energized as program starts.

Wk 3 HIGH EI. Derailer activated, structure held. Brief disappointment → reset same-week. Hinge habit operating as designed.

Wk 4 Action-proven. First RQS=4 in program (deepest reflection quality available). One competitive chance → breakthrough at-bat:

> *"the one chance I got, I did something with."*

Wk 5 ↑ PHASE ADVANCEMENT to Consistent. Identity-embedded statement in journal:

> *"If I'm given a chance, use it well."*

Wk 6 First competitive validation: pinch-hit single, first collegiate start. NC composure held.

Wk 7 FIRST COMPETITIVE FAILURE — pinch-hit strikeout. Reset language by Wednesday. Failure-resilient.

Wk 8 Agency-driven. First self-directed development initiative — defensive practice with Kabine on her own time. Attention-management awareness:

> *"separate softball from my life."*

Wk 9 First direct coach advocacy. Second competitive failure → same-day composure.

Wk 10 Acceptance-oriented. Zero playing time.

> *"I think I'm just at the point where I don't even care to play anymore... I just want everyone to do well."*

Wk 11 Re-engaged inside acceptance. First Neutral days in 70-day Win streak (challenge-writing, not behavioral disengagement). First specific physical controllable named:

> *"running on toes, not backs of feet."*

Wk 12 ARTICULATED PARADOX COMPOSURE — peak moment. Wednesday breakthrough:

> *"fast asf today tbh, got all my mf bunts down."*
>
> *"I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well."*

INTAKE → CURRENT

FROM: outcome-dependent confidence. TO: outcome-INDEPENDENT, self-authored recognition.

The same athlete who entered the program needing external validation to feel confident is now naming her own performance and sustaining composure when external recognition does not arrive.

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Grace Kindel | Week 7 | March 9-15, 2026 ----------

Grace,

Monday you stepped in to pinch-hit, you struck out, and the first thing you wrote was "that sucks." By Wednesday you wrote, "I just need to reset and I'll be fine." That two-day sequence is the most important thing that has happened in this program so far. The reset you've been carrying since Day 1, the one in your baseline, was always going to need a real test before we knew it actually worked. Monday was the test. Wednesday was the answer.

Last week's commitment was to write one specific action you wanted to execute before each game, anchored to a controllable. The written sentence didn't make it to the page this week. Your warmup preparation kept showing up, but the specific written one-sentence action is still open. That commitment carries into next week, and it's pointed exactly at the moments you faced this week.

You handled a competitive failure the way someone who controls her own confidence handles it. Brief disappointment. No spiral. No multi-day disruption. Reset language inside two days. That's your hinge habit, Grace, working under the exact conditions it was built for. When the outcome went against you, you came back to your center ring and kept going.

Saturday you didn't play and your response was to be loud, present, and prepared. "When I don't I'm still up and loud and prepared." You named your own controllable on a day with no competitive opportunity. That composure is what keeps you in position for the next chance.

Goal-setting, though, has stayed at its lowest point for two straight weeks. "Keep working hard." "Same thing." Your execution has never been stronger, but when asked what you want to accomplish, the answer has gone automatic. You've proven you can show up every day. The next layer is showing up with a specific target on game days. The philosophy works. Naming the action before each moment keeps it sharp.

You came into this program wanting to stay confident during competition. This week you proved something bigger. Your confidence holds after failure, not just after success.

YOUR ACTION: AFTER EACH GAME DAY THIS WEEK

After each game day, whether you play or not, write one sentence naming something you controlled well that day. One controllable action you owned, not a result, not playing time, not a coach decision.

If you played, name the action. If you didn't play, name how you showed up. End of the week, one sentence per game day, every one of them about something in your center ring. That's what tells you the commitment is working.

Control what's yours. Coach Arron

NEXT WEEK FOCUS QUESTION

You said you need to reset and you'll be fine. What does your reset actually look like now, in one specific thing you do in the moment after something doesn't go your way?

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Grace Kindel | Week 12 | April 20-26, 2026 ----------

Grace,

Wednesday is the week. You wrote, "fast asf today tbh, got all my mf bunts down." That's the first time in this program you've named your own work that way without me asking the question first. You said you could feel it. You said you knew the people who needed to see it were watching.

Then by Sunday you wrote the whole thing out: "I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well." That sentence holds the last six weeks in one place. The work was visible. The coaches saw. The outcome didn't change. You kept going anyway.

That last part is what the program has been building toward. When you walked in here, the goal you wrote for yourself was staying confident in your ability during competition. Back then, confidence came from being on the field. This week it came from naming your own work, hearing the silence after, and continuing anyway. That's confidence that doesn't need the field to confirm it, Grace.

The recovery from last weekend's two days showed up too. You said you were going to sit with the mindset emails each day. You did. Every day this week paired a prompt with something specific you were working on. That's the commitment we set last week, run for the full seven.

You ended the recap with "idk at this point give me something." Fair. Two games left.

YOUR ACTION: BEFORE FRIDAY AND SATURDAY

Before warmup begins on Friday and Saturday, write down one specific physical cue you're going to execute that day. A hitting cue. A throwing target. A footwork drill. The Wednesday standard, applied to one thing per game. After the game, write one sentence on how it showed up. Two games, two cues, two sentences. Whether you play or not, those reps are yours.

The work is yours, Grace. Run the last two with it.

Coach Arron

NEXT WEEK FOCUS QUESTION

Wednesday you did the work and the people who needed to see it did. The result still didn't change. What's the part of that work that's still worth running through the final two games?

DEEP DIVE COACHING ANALYSIS

Grace Kindel | Week 12 | April 20-26, 2026

MINDSET SUMMARY

This was the week your work showed up where it had to and you named it yourself. Wednesday in practice, you got every bunt down on the first pitch, you felt fast out of the box, and you wrote it without anyone prompting you to. By Sunday you wrote the rest of it out: that you did well, that the coaches saw, and that the result still didn't change. The full picture of what happened, in your own words.

The two days last weekend that didn't fully count didn't extend. You returned to seven full days won, executed the metacognitive goal you set for yourself last week (sit with the mindset emails each day), and paired every day's prompt with something specific you were working on. The work this week was clean and your account of it was the most articulate you've put on paper in three months.

WEEKLY TRENDLINE

The position-frustration arc since Week 6 has carried different shapes. Week 8 was the Sunday with Kabine, the first time you took development into your own hands. Week 9 was the conversation with the coach, the first time you advocated for yourself directly. Week 10 was the acceptance posture, the first time you stayed steady inside the situation without trying to change it. This week was different from all three. You did the work, the work was visible, the coaches saw it, and you wrote out the paradox that the outcome still didn't change. None of the prior weeks held all of that in one articulation.

Wednesday's performance is where the running-technique work from last week shows up. You named running on toes for the first time in Week 11, the first absorption of the speed thing from Week 9. This week you're naming bunt execution and out-of-the-box speed. Different mechanic, same direction: specific physical work, named, and now executed visibly. The coach feedback that came through that conversation is being absorbed without you needing to surface it directly.

STRENGTH SIGNALS

WEDNESDAY PERFORMANCE RECOGNITION, SELF-AUTHORED

You wrote, "fast asf today tbh, got all my mf bunts down." You felt it, you recognized it, you knew the people watching saw it. Twelve weeks of recaps, and this is the first time you've named your own practice-level execution this way. You've named the work plenty before. The new piece is the quality of how it landed.

That noticing is the part that has to come from inside before it can be sustained from outside.

PARADOX ARTICULATION HELD IN ONE SENTENCE

"I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well." Read that sentence again. You're holding all of it: it doesn't matter, it does matter, it's annoying, you're keeping going. Most athletes in this position pick one and let the others fall. You named the whole thing and stayed steady inside it.

DAILY EXECUTION FULL RECOVERY

Last Saturday and Sunday were the first two days in eleven weeks where you didn't fully win the day. They didn't extend. You returned to a full seven, ran the prior week's metacognitive goal as this week's stated weekly goal (sit with the mindset emails each day), and paired every prompt with specific work. Eighty-two days into the program. The daily standard's held all but two of them.

Last weekend's drift was contained. The weekday rhythm answered.

GROWTH AREAS

THE GOAL-REQUEST AT THE END OF THE WEEK

"idk at this point give me something" was honest. You've been setting your own goals for twelve weeks and the season is closing. There's nothing wrong with handing the goal back to me at this point in the arc, especially when the playing-time situation has not given you the kind of feedback most athletes use to set the next week's target. Worth noticing for yourself: this is the first time in the program you've asked for direction rather than written your own.

Whether that's fatigue with self-direction or a deliberate handoff at the end of the season is a question only you can answer. Either is a reasonable place to be.

THE FOOT, NEW THREAD

"lowkey been acting up again" on Sunday. You named it once, did rehab on it, and kept going. New piece of physical context heading into the final two games. Worth monitoring on Friday and Saturday. Nothing major yet.

IDENTITY THREAD

When you walked into this program, the goal you set for yourself was staying confident in your ability during competition. The phrase you wrote when you started was, "I need to make sure I succeed and if I don't I will let myself and the team down." Confidence tied to outcome, with the cost of failure carrying the team weight.

Twelve weeks into this year, the way you carry confidence looks different. You named your own work this week without anyone asking. You said the people who needed to see it did. And when the result didn't change, you wrote out the paradox and kept going. That's not the same place you walked in from. The work is visible to you whether or not it produces the outcome, and the outcome no longer decides whether the work was real.

The two final games are the last opportunity to run that standard inside this season. Whatever happens on Friday and Saturday in terms of playing time has already been written by the prior six weeks. What hasn't been written yet is what you do with the cue you set for yourself, before warmup begins, on the last two days that count. That part is still yours.

Athlete: Grace Kindel Week: 2026-04-20 to 2026-04-26 Report Type: Weekly Performance Insight Classification: Informational Only

"These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

---

1) WEEKLY PERFORMANCE CLASSIFICATION

Weekly Tier: Growth Trend Direction: → Stable

This week reflects a continued Growth classification with stable directional momentum. Twelfth consecutive Growth-tier week. Daily execution recovered fully to seven Win days following the prior reporting period's first daily-standard deviations. Emotional intensity indicators remained within the Low band.

---

2) CONSISTENCY SIGNAL

Status: Stable

Behavioral execution patterns returned to full daily-standard alignment after the prior period's two-day deviation. Twelve consecutive weeks of Growth-tier classification. Daily Win count returned to maximum (seven of seven). Eighty-two Win days across eighty-four program days to date.

---

3) FOCUS DISTRIBUTION (BULLSEYE TREND)

Primary Focus Ring: Center-Dominant

Sustained center-dominant focus distribution across the reporting period. No noise fixation detected. Consistent composed focus profile across the most recent reporting periods.

---

4) RECOMMITMENT & RESPONSE SIGNAL

Recommitment Strength: Not Applicable

Response Stability: Not Applicable

No adverse execution events required recommitment during this reporting period. Daily Win execution sustained across the full week without deviation. Response stability indicators remain not applicable for the sustained execution trajectory across the full program history.

---

5) CONFIDENCE MOMENTUM (DIRECTIONAL ONLY)

Trend: ↑ Building

Confidence momentum indicators show forward movement this reporting period through preparation-linked recognition. Confidence framing now includes both preparation-linked recognition and outcome-independent maintenance, indicating progression from prior-period forward-facing readiness signals to current-period self-recognition without external validation requirement.

---

6) STRESS LOAD INDICATOR (BAND-BASED)

Band: Low

Stress load indicators remained within the Low band. No elevated stress signals detected this reporting period.

---

7) GROWTH PHASE STATUS

Current Phase: Consistent Movement: → Stable

Developmental indicators remain within the Consistent phase with stable maintenance. Primary execution indicators continue to meet Consistent-phase criteria (sustained Growth tier classification, stable positive consistency profile, behavioral composure, full daily-standard execution recovery). No regression threshold criteria met.

---

8) KEY PERFORMANCE SIGNAL (WEEKLY PRIORITY)

Primary Development Signal This Week: Preparation-Linked Self-Recognition Emergence

Current development indicators center on the emergence of process-linked self-recognition without external validation requirement. Daily execution fully recovered to seven Win days. The combination of sustained execution, stable composed focus distribution, and confidence framing that integrates preparation-linked recognition with outcome-independent maintenance indicates mature integration of process-anchored confidence as a concurrent active indicator.

---

9) COACH CONTEXT CUE

Daily-standard execution recovered fully (seven Win days) following the prior period's two daily-standard deviations. Stress load indicators remained within the Low band. End-of-period goal-setting indicator showed engagement with the coaching layer, which the assigned micro-commitment addresses directly. Two competitive events scheduled for the

upcoming reporting period (likely final regular-season events). The overall pattern shows mature integration of process-linked confidence and outcome-independent execution maintenance.

---

10) COMPOSITE READINESS SIGNAL

Readiness Level: ↑ Positive (Green)

Performance readiness indicators reflect full daily-standard execution recovery (seven Win days), preparation-linked self-recognition emergence, sustained Low stress-load classification, and forward-aligned alignment status. The combination produces a Positive readiness classification. Two additional competitive events scheduled for the upcoming reporting period.

VIRTUSFOCUS: PARENT COACHING MESSAGE

Grace | Week 12 | April 20-26, 2026 ----------

WEEKLY CONTEXT

Grace had a strong week. Her daily routine held all seven days, and she's continuing to build the kind of consistency that has carried her through a long stretch of the season. Late-season rhythm at this point is steady. She's operating at the level that twelve weeks of work has produced.

WHAT STOOD OUT

What stood out this week is that Grace recognized her own work in real time. She named the quality of what she was doing without needing to be asked, and she stayed composed when the recognition didn't change the outcome. That self-awareness about her own preparation is a real shift, the kind that takes weeks of practice to develop.

WHAT'S AHEAD

Two games remain on the schedule next week. The coaching focus heading into them is consistency of preparation, carrying the same standard into the final games she's been carrying through practice. End-of-season closing weeks. Whatever the lineup looks like, the work she does to prepare is hers.

HOW YOU CAN SUPPORT

Grace is at a point in her development where she's running her own preparation well. Encouraging the process and being available if she wants to talk about how things are going is the most helpful support right now. The closing weeks of any season carry their own weight, and your steady presence is the right kind of support for that.

Coach Arron ----------

ATHLETE B — D2 MEN'S TRACK AND FIELD THROWS

10-Week Coaching Arc | Athlete B — Progression Visual | Feb 2 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 10 — final week of athlete's collegiate career after 16 years in T&F)

WEEKLY TIER (1 Mixed week, 9 Growth)

9 of 10 weeks Growth. Wk 8 = first Mixed week of program (Mt Union setback under severe weather + facility loss). 60 Win / 9 Neutral / 2 Missed across 70 program days.

KEY INFLECTION POINTS

Wk 1 Illness recovery + approach-framed re-engagement. Returns to competition. Category-only WTD scoring.

Wk 2 Near-PR Shotput (16.44m vs 16.70m career best) at highest-level meet of season. Solo at the meet — composure held in isolation.

Wk 3 First Gold Streak. Won both events. Identity-level achievement.

Wk 4 PSAC championship retrospective after 2.5-week gap. MODERATE EI. Partially Aligned. Multi-domain overload derailer activated under championship pressure. Outdoor transition begins.

Wk 5 SHIPPENSBURG BREAKTHROUGH — best outdoor opener of career. All PSAC auto-qualifiers hit. 7/7 Win — second Gold Streak. PSAC lesson named in athlete's own words:

> *"properly planned, not spontaneous."*

Wk 6 First Missed day in 42 program days (Friday illness). CMU meet cancelled. Only 1 practice in 7 days. Moderate recommitment (lifted Saturday while sick). Reframed the disruption:

> *"a blessing"*

Wk 7 Easter break recovery week executed to stated intention. 7/7 Win — third Gold Streak. Bullseye center-ring expanded 1 → 6 items. Achievement internal:

> *"mental stability and equilibrium."*

Wk 8 FIRST MIXED WEEK in program. Mt Union 2-day meet under severe weather. Marks below standard across all three events. Practice facility permanently lost. Strongest negative language to date — but weekday execution held, athlete competed through.

Wk 9 SLIPPERY ROCK PROGRAM-BEST. Outdoor shot put school record (over 16m). New Discus PR. 7/7 Win — fourth Gold Streak. Preparation-quality system VALIDATED A SECOND TIME, this time under MORE constrained conditions. Athlete's own summary:

> *"best meet of the season."*

Wk 10 ↑ PHASE ADVANCEMENT to Consistent — final week of collegiate career. Two real-time strategic decisions named in athlete's own voice:

> *"I didn't need to be there but I chose to to support my team and to keep my competition readiness up."*
>
> *"leave colligate sports with gratitude, reverence, and peace."*

INTAKE → CURRENT

FROM: multi-domain overload derailer. TO: preparation-system mastery across three timescales — retrospective lesson extraction (Wk 4), prospective design (Wks 5, 9), in-competition real-time decisions (Wk 10).

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Angelo Allen | Week 10 | April 20-26, 2026 ----------

Angelo,

Saturday at the last-chance meet, you'd already won shot put and discus. The next event was hammer, and the ring was slippery. You scratched. You wrote exactly why: "to save myself for PSAC championship next week." That's the sentence that earned my attention this week.

That was preparation, made inside the meet itself, with the championship one week out. The Slippery Rock pattern from last week showed up again here, but at a different level. Last week you made preparation decisions before the meet. This week you made one inside it.

The meet itself, you didn't need to be at. You wrote that too, and you went anyway: to support your team and to keep your competition readiness up. Two strategic decisions in one Saturday, both yours, both named in your own voice. Built off what was learned last week, exactly like you said you would.

Then I read your goal for next week. "To leave colligate sports with gratitude, reverence, and peace. After 16 years of being in Track and Field." That is a senior writing the meaning of his last meet before throwing it. You're already there, Angelo. Before you even leave for Shippensburg.

Ten weeks ago, you came back from PSAC disappointment with a question about what preparation actually requires. You answered it three times. At Shippensburg in April. At Slippery Rock last week. At the last-chance meet on Saturday. Thursday is the fourth answer.

YOUR ACTION: BEFORE EACH PSAC EVENT

For each of the three PSAC days (Thursday hammer, Friday discus, Saturday shot put), name the day's individual intention before warmup. One sentence each. Source it from the language you already wrote: humility, preparation, determination, readiness, gratitude, reverence, peace. What you want to bring to that specific day.

Sixteen years. Three intentions. Throw them the way you wrote them.

Coach Arron

NEXT WEEK FOCUS QUESTION

You wrote what you want PSACs to be in your own words: humility, preparation, determination, readiness, gratitude, reverence, peace. Of those seven, which one do you most want to carry into Thursday's hammer warmup?

VIRTUSFOCUS: PARENT COACHING MESSAGE

Hunter | Week 1 | April 20-26, 2026 ----------

WEEKLY CONTEXT

Hunter is back in the program after time away during recovery, and this week was about re-establishing the daily rhythm that healing depends on. He stayed consistent across all seven days with his physical therapy, compression work, and stretching routine. The work was steady and process-oriented.

WHAT STOOD OUT

What stood out this week was the wrestling banquet, where Hunter received the Wrestler of the Year award for the season. Equally important is the way he set his goal for the week, framed around small daily improvements with healing as the priority. That mindset is the right fit for the phase he's in.

WHAT'S AHEAD

With no competition on the schedule, the focus heading into the coming weeks is on continuing the daily recovery work and connecting to what each day adds to his return readiness. Steady rehab work now is what builds the foundation for the next time he steps onto the mat.

HOW YOU CAN SUPPORT

Encouraging the process and being available if Hunter wants to talk about how the recovery is going is the most helpful support right now. The Wrestler of the Year recognition is a meaningful milestone. Celebrate it for what it is, without making it the standard he has to live up to next.

Coach Arron

Team: VirtusFocus Validation Program Week: Cross-Temporal Validation (Most Recent Week Per Athlete) Report Type: Weekly Team Snapshot Classification: Informational Only Athletes Included: 6

> "These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

NOTE: This is a validation snapshot using each athlete's most recent week of data. Athletes span different date ranges (May 2025 through March 2026) and represent different sports and institutions. This tests the T1-T7 aggregation format and logic, not temporal alignment. In production, all athletes on a team would share the same reporting week.

T1) PERFORMANCE DISTRIBUTION

```

Reset:   0/6  (0%)
Directional Momentum: → Stable
```

The roster is evenly split between Growth-tier and Mixed-tier performance this period, with no athletes in Reset. All six athletes show stable directional momentum in their weekly tier trends, indicating a steady performance foundation across the program. The absence of Reset-tier athletes and the balanced Growth-Mixed distribution suggest a cohort maintaining behavioral engagement without significant regression.

T2) TEAM CONSISTENCY SIGNAL

```
Overall Status: Transitional Variability
Stable:    2/6  (33%)
Variable:  4/6  (67%)
Determination: Axis 1 (Distribution) = 67% Variable, 0%
Volatile. Axis 2 (Trend Direction) = all 6 athletes show
Stable weekly tier trends. → Transitional Variability
(>40% Variable, zero Volatile, all trends Stable).
```

Two-thirds of athletes show variable consistency patterns this period, while one-third demonstrate stable positive consistency. The variability is context-driven — athletes in variable patterns are navigating competitive transitions, structural changes, or post-competition processing. No athletes show volatile or deteriorating consistency signals.

T3) TEAM FOCUS DISTRIBUTION

```
Center-Dominant:     6/6  (100%)
Mixed Focus:         0/6  (0%)
Outer-Ring Drift:    0/6  (0%)
```

All six athletes demonstrate center-dominant controllable alignment, directing attention toward preparation, effort, and response patterns rather than external factors. This indicates strong collective focus on elements within individual control across the entire roster.

T4) TEAM RECOMMITMENT TREND

```
Strong:                  0/6  (0%)
Moderate:                0/6  (0%)
Low:                     0/6  (0%)
Not Applicable:          6/6  (100%)
```

The majority of athletes did not experience adverse execution events requiring recovery this period. A 100% Not Applicable rate indicates that the roster maintained sufficient daily engagement to avoid triggering recommitment assessment. This reflects stable behavioral patterns rather than a data gap.

T5) TEAM CONFIDENCE DIRECTION

```
Building:     1/6  (17%)
Stable:       4/6  (67%)
Rebuilding:   1/6  (17%)
Overall Trend: → Stable
```

The majority of athletes show stable confidence trajectories linked to consistent preparation patterns. One athlete demonstrates building confidence through successful preparation-to-performance transfer, while one is in a rebuilding phase following a competitive transition period. No athletes show declining or variable confidence signals.

T6) TEAM STRESS LOAD DISTRIBUTION

```
Low:       3/6  (50%)
Moderate:  3/6  (50%)
Elevated:  0/6  (0%)
```

The roster is evenly split between low and moderate stress loads, with no athletes at elevated levels. The moderate stress indicators reflect competitive schedules and developmental transitions rather than acute distress. The absence of elevated stress across the program suggests a manageable collective load.

T7) TEAM DEVELOPMENTAL DISTRIBUTION

```
Emerging:    0/6  (0%)
Developing:  5/6  (83%)
Consistent:  1/6  (17%)
Leadership:  0/6  (0%)
Team Composite Readiness Distribution:
↑ Positive (Green):    0/6  (0%)
→ Steady (Yellow):     6/6  (100%)
↓ Attention (Orange):  0/6  (0%)
```

The program is predominantly in the Developing phase, with one athlete having advanced to the Consistent phase. This distribution is expected for a cohort in an active growth cycle. All six athletes show Steady readiness indicators, reflecting a stable foundation without athletes requiring immediate attention. The uniform readiness signal indicates the cohort is collectively maintaining engagement and behavioral patterns at a sustainable level, with no athletes flagged for coaching intervention.
