GTM BREAKOUT PACKET

CONFIDENTIAL UNDER NDA

Name (optional): _____

Background (one line): _____

_____

WHY YOU'RE IN THIS BREAKOUT

You're here because of your experience in sales, marketing, content, and consumer brand strategy. We need you to challenge the story, the channel, the architecture, and the price. We are not looking for endorsement. We're looking for what we are missing, what would not work, and what we are getting wrong. Write as much or as little as you want. The note-taker will capture the discussion; your written notes give us signal we would otherwise miss.

THE FORMAT

Five questions, ~9 minutes each. One question per page. A final page for anything we did not ask but should have. The artifact you'll review at Question 4 includes real coaching output and dashboard mockups.

QUESTION 1 — PITCH STRESS-TEST

Forget what we've shown you. In one sentence, how would you describe VirtusFocus to someone who's never heard of it?

_____
_____
_____

Where does the story land?

_____
_____
_____
_____

Where does it stumble?

_____
_____
_____
_____
_____

QUESTION 2 — CATEGORY AND COMPETITION

What category does this compete in, in your head?

[ ] Mental performance coaching [ ] Athlete development tech [ ] Wellness app
[ ] Edtech / training platform

Other:

_____

Who are we up against?

_____
_____
_____
_____

How do we differentiate fast — in one line a parent or coach would actually repeat?

_____
_____
_____
_____

QUESTION 3 — SINGLE APP vs WHITE-LABEL

We're betting both channels are viable: institutional (programs, athletic departments) AND D2C (parents and athletes directly). Different message, different price, different pitch.

Two architectures to weigh:

(a) The same app serves both markets — one product, two pitches.

(b) White-label version institutions can duplicate and "skin" with their own brand. Ohio State gets "Ohio State Mental Performance" with their colors, fonts, branding — part of their university family.

[ ] (a) Same app [ ] (b) White-label [ ] Both

Why:

_____
_____
_____
_____
_____

What does each cost us that we're not seeing?

_____
_____
_____
_____
_____

QUESTION 4 — REACT TO THE ARTIFACT

You've reviewed Grace's coaching output and the dashboard mockups.

If you were marketing this tomorrow, what's the headline asset?

_____
_____
_____
_____

What story actually sells it?

_____
_____
_____
_____

What proof are we missing?

_____
_____
_____
_____

QUESTION 5 — KILLER TEST

You're advising us on GTM strategy.

[ ] Direct-to-consumer first [ ] Institutional first

[ ] Independent (one path that goes its own way) [ ] Simultaneously

What does the first $1M of revenue look like?

_____
_____
_____
_____
_____

What would you absolutely NOT do?

_____
_____
_____
_____
_____

ANYTHING ELSE

What did we not ask that we should have?

_____
_____
_____
_____
_____
_____
_____

Anything else for the record:

_____
_____
_____
_____
_____
_____
_____

Thank you.

"VirtusFocus" Focus Group

May 9, 2026

GTM ARTIFACT PACKET

WHAT'S IN THIS PACKET

The full product picture. Every audience layer represented. What the athlete reads, what the coach reads, what the parent reads, what the coaching staff receives at the team level. Includes baseline snapshots for all three athletes (Day 1 starting points) and selected app mockup printouts.

Use these to react to category, story, channel, and architecture during Question 4 of your breakout.

ATHLETES FEATURED

Athlete A — D2 women's softball, outfielder. 12-week coaching arc (depth case).
Athlete B — D2 men's track and field, throws. 10-week coaching arc, retiring after PSAC championship.
Athlete C — High school wrestling. Week 1 of return arc post-injury (HS-context parent exemplar).

CONTENTS

1. Athlete A — Baseline Snapshot
   Day 1 starting point
2. Athlete A — 12-week progression visual
3. Athlete A — Week 12 Coaching Message
   athlete-facing example
4. Athlete A — Week 12 Coach Insight
   coach-facing example
5. Athlete A — Week 12 Parent Coaching Message
   parent-facing example
6. Athlete A — Week 12 Parent Insight
   parent dashboard sample
7. Athlete B — Baseline Snapshot
   Day 1 starting point
8. Athlete B — 10-week progression visual
9. Athlete B — Week 10 Coaching Message
   second athlete example
10. Athlete C — Baseline Snapshot
    Day 1 starting point
11. Athlete C — Week 1 Parent Coaching Message
    HS-context exemplar
12. Sample Team Snapshot
    institutional aggregate dashboard
13. Selected App Mockup Printouts
    Home / Tune-Up / Weekly Recap / Inbox

All material confidential under NDA. Printed copies are collected at end of session; digital copies are available on request and delivered as personalized watermarked PDFs.

ATHLETE A - BASELINE PROFILE

Sport: Division II Women's Softball Position: Outfielder Years Competing: 12 Mental Game Rating: 6/10 (athlete self-assessed at intake)

---

1. PERFORMANCE CONTEXT

Athlete A is a softball outfielder at the Division II collegiate level, with approximately 12 years in the sport. She is preparing for the upcoming competitive season and is focused on improving both physical readiness (speed, strength, mobility) and mental consistency. Her current self-assessed mental performance rating is 6/10, suggesting moderate confidence with clear opportunity for improvement in performance stability and response to mistakes.

---

2. PRIMARY STATED GOALS

Outcome Goals:

- Earn a strong position or role on the team for the upcoming season.
- Enter the next season physically stronger, faster, more mobile, and more confident.

Behavior Goals:

- Maintain confidence in her abilities during competition.
- Improve consistency in her mental approach.
- Learn to accept mistakes and move forward without dwelling on them.

---

3. MOTIVATION DRIVERS

Internal Drivers:

- Personal improvement and self-development.
- Desire to build stronger confidence and mental consistency.

External Drivers:

- Responsibility to contribute positively to the team.
- Desire not to let teammates or herself down.

Identity Language Detected:

- Values being a confident and reliable competitor.
- Expresses responsibility toward team performance.

---

4. KNOWN DERAILERS

Primary Derailers:

- Loss of confidence during competition.
- Difficulty letting go of mistakes or negative outcomes.
- Inconsistent motivation when performance declines.

Derailer Context:

- Mistakes or perceived failures during competition appear to disrupt belief and focus.

---

5. CONFIDENCE PATTERN

Confidence Type: Outcome-reactive

Description: Her confidence appears tied to performance outcomes. Successful moments likely reinforce belief, while mistakes or perceived failures can quickly reduce confidence. Stabilizing confidence independent of immediate outcomes will be a key area of development.

---

6. IDENTITY FRICTION

Friction Points:

- Desires to stay confident during competition but reports difficulty maintaining belief after mistakes.
- Wants to perform reliably for her team but places high pressure on herself in important moments.

---

7. STRESS / TRIGGER PROFILE

Competitive Pressure:

- Big moments create internal pressure to succeed.

Primary Trigger:

- Fear of letting teammates or herself down.

Behavioral Response Pattern:

- Increased internal pressure before key moments.
- Mistakes can trigger reduced confidence and overthinking.

External Stressors:

- Insufficient data provided at intake.

8. INITIAL COACHING EMPHASIS

Coaching Priorities:

- Develop a consistent reset routine after mistakes.
- Reinforce confidence anchored to preparation rather than outcomes.
- Build structured focus cues for high-pressure moments.

Baseline Anchors (locked, traced through every weekly output):

Identity Claim: Wants to stay confident in her ability during competition.

Hinge Habit: Immediate reset and refocus after mistakes.

Primary Derailer: Loss of confidence following errors or perceived failure.

Why It Matters: Stable confidence supports consistent performance and increases her ability to earn and maintain a strong team role.

Exact Phrase (verbatim from intake): "I need to make sure I succeed and if I don't I will let myself and the team down."

9. INITIAL GROWTH PHASE

Growth Phase: Developing

Justification: She demonstrates strong commitment to improving her mindset and awareness of areas she wants to strengthen. However, her confidence currently fluctuates with performance outcomes, indicating that consistent confidence regulation and response to mistakes are still developing.

CONFIDENTIAL UNDER NDA

ATHLETE A — D2 WOMEN'S SOFTBALL, OUTFIELDER

12-Week Coaching Arc | Athlete A — Progression Visual | Jan 12 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 5)

WEEKLY TIER

Growth across all 12 weeks. 82 of 84 days = Win. Gradient = building momentum across the arc.

KEY INFLECTION POINTS

Wk 1-2 Outcome-reactive baseline at intake. Preparation-energized as program starts.

Wk 3 HIGH EI. Derailer activated, structure held. Brief disappointment → reset same-week. Hinge habit operating as designed.

Wk 4 Action-proven. First RQS=4 in program (deepest reflection quality available). One competitive chance → breakthrough at-bat:

> *"the one chance I got, I did something with."*

Wk 5 ↑ PHASE ADVANCEMENT to Consistent. Identity-embedded statement in journal:

> *"If I'm given a chance, use it well."*

Wk 6 First competitive validation: pinch-hit single, first collegiate start. NC composure held.

Wk 7 FIRST COMPETITIVE FAILURE — pinch-hit strikeout. Reset language by Wednesday. Failure-resilient.

Wk 8 Agency-driven. First self-directed development initiative — defensive practice with Kabine on her own time. Attention-management awareness:

> *"separate softball from my life."*

Wk 9 First direct coach advocacy. Second competitive failure → same-day composure.

Wk 10 Acceptance-oriented. Zero playing time.

> *"I think I'm just at the point where I don't even care to play anymore... I just want everyone to do well."*

Wk 11 Re-engaged inside acceptance. First Neutral days in 70-day Win streak (challenge-writing, not behavioral disengagement). First specific physical controllable named:

> *"running on toes, not backs of feet."*

Wk 12 ARTICULATED PARADOX COMPOSURE — peak moment. Wednesday breakthrough:

> *"fast asf today tbh, got all my mf bunts down."*
>
> *"I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well."*

INTAKE → CURRENT

FROM: outcome-dependent confidence. TO: outcome-INDEPENDENT, self-authored recognition.

The same athlete who entered the program needing external validation to feel confident is now naming her own performance and sustaining composure when external recognition does not arrive.

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Grace Kindel | Week 12 | April 20-26, 2026 ----------

Grace,

Wednesday is the week. You wrote, "fast asf today tbh, got all my mf bunts down." That's the first time in this program you've named your own work that way without me asking the question first. You said you could feel it. You said you knew the people who needed to see it were watching.

Then by Sunday you wrote the whole thing out: "I did so good, and it still just like doesnt matter. but i cant say it doesnt matter because like it does, its just annoying but once again oh well." That sentence holds the last six weeks in one place. The work was visible. The coaches saw. The outcome didn't change. You kept going anyway.

That last part is what the program has been building toward. When you walked in here, the goal you wrote for yourself was staying confident in your ability during competition. Back then, confidence came from being on the field. This week it came from naming your own work, hearing the silence after, and continuing anyway. That's confidence that doesn't need the field to confirm it, Grace.

The recovery from last weekend's two days showed up too. You said you were going to sit with the mindset emails each day. You did. Every day this week paired a prompt with something specific you were working on. That's the commitment we set last week, run for the full seven.

You ended the recap with "idk at this point give me something." Fair. Two games left.

YOUR ACTION: BEFORE FRIDAY AND SATURDAY

Before warmup begins on Friday and Saturday, write down one specific physical cue you're going to execute that day. A hitting cue. A throwing target. A footwork drill. The Wednesday standard, applied to one thing per game. After the game, write one sentence on how it showed up. Two games, two cues, two sentences. Whether you play or not, those reps are yours.

The work is yours, Grace. Run the last two with it.

Coach Arron

NEXT WEEK FOCUS QUESTION

Wednesday you did the work and the people who needed to see it did. The result still didn't change. What's the part of that work that's still worth running through the final two games?

Athlete: Grace Kindel Week: 2026-04-20 to 2026-04-26 Report Type: Weekly Performance Insight Classification: Informational Only

"These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

---

1) WEEKLY PERFORMANCE CLASSIFICATION

Weekly Tier: Growth Trend Direction: → Stable

This week reflects a continued Growth classification with stable directional momentum. Twelfth consecutive Growth-tier week. Daily execution recovered fully to seven Win days following the prior reporting period's first daily-standard deviations. Emotional intensity indicators remained within the Low band.

---

2) CONSISTENCY SIGNAL

Status: Stable

Behavioral execution patterns returned to full daily-standard alignment after the prior period's two-day deviation. Twelve consecutive weeks of Growth-tier classification. Daily Win count returned to maximum (seven of seven). Eighty-two Win days across eighty-four program days to date.

---

3) FOCUS DISTRIBUTION (BULLSEYE TREND)

Primary Focus Ring: Center-Dominant

Sustained center-dominant focus distribution across the reporting period. No noise fixation detected. Consistent composed focus profile across the most recent reporting periods.

---

4) RECOMMITMENT & RESPONSE SIGNAL

Recommitment Strength: Not Applicable

Response Stability: Not Applicable

No adverse execution events required recommitment during this reporting period. Daily Win execution sustained across the full week without deviation. Response stability indicators remain not applicable for the sustained execution trajectory across the full program history.

---

5) CONFIDENCE MOMENTUM (DIRECTIONAL ONLY)

Trend: ↑ Building

Confidence momentum indicators show forward movement this reporting period through preparation-linked recognition. Confidence framing now includes both preparation-linked recognition and outcome-independent maintenance, indicating progression from prior-period forward-facing readiness signals to current-period self-recognition without external validation requirement.

---

6) STRESS LOAD INDICATOR (BAND-BASED)

Band: Low

Stress load indicators remained within the Low band. No elevated stress signals detected this reporting period.

---

7) GROWTH PHASE STATUS

Current Phase: Consistent Movement: → Stable

Developmental indicators remain within the Consistent phase with stable maintenance. Primary execution indicators continue to meet Consistent-phase criteria (sustained Growth tier classification, stable positive consistency profile, behavioral composure, full daily-standard execution recovery). No regression threshold criteria met.

---

8) KEY PERFORMANCE SIGNAL (WEEKLY PRIORITY)

Primary Development Signal This Week: Preparation-Linked Self-Recognition Emergence

Current development indicators center on the emergence of process-linked self-recognition without external validation requirement. Daily execution fully recovered to seven Win days. The combination of sustained execution, stable composed focus distribution, and confidence framing that integrates preparation-linked recognition with outcome-independent maintenance indicates mature integration of process-anchored confidence as a concurrent active indicator.

---

9) COACH CONTEXT CUE

Daily-standard execution recovered fully (seven Win days) following the prior period's two daily-standard deviations. Stress load indicators remained within the Low band. End-of-period goal-setting indicator showed engagement with the coaching layer, which the assigned micro-commitment addresses directly. Two competitive events scheduled for the

upcoming reporting period (likely final regular-season events). The overall pattern shows mature integration of process-linked confidence and outcome-independent execution maintenance.

---

10) COMPOSITE READINESS SIGNAL

Readiness Level: ↑ Positive (Green)

Performance readiness indicators reflect full daily-standard execution recovery (seven Win days), preparation-linked self-recognition emergence, sustained Low stress-load classification, and forward-aligned alignment status. The combination produces a Positive readiness classification. Two additional competitive events scheduled for the upcoming reporting period.

VIRTUSFOCUS: PARENT COACHING MESSAGE

Grace | Week 12 | April 20-26, 2026 ----------

WEEKLY CONTEXT

Grace had a strong week. Her daily routine held all seven days, and she's continuing to build the kind of consistency that has carried her through a long stretch of the season. Late-season rhythm at this point is steady. She's operating at the level that twelve weeks of work has produced.

WHAT STOOD OUT

What stood out this week is that Grace recognized her own work in real time. She named the quality of what she was doing without needing to be asked, and she stayed composed when the recognition didn't change the outcome. That self-awareness about her own preparation is a real shift, the kind that takes weeks of practice to develop.

WHAT'S AHEAD

Two games remain on the schedule next week. The coaching focus heading into them is consistency of preparation, carrying the same standard into the final games she's been carrying through practice. End-of-season closing weeks. Whatever the lineup looks like, the work she does to prepare is hers.

HOW YOU CAN SUPPORT

Grace is at a point in her development where she's running her own preparation well. Encouraging the process and being available if she wants to talk about how things are going is the most helpful support right now. The closing weeks of any season carry their own weight, and your steady presence is the right kind of support for that.

Coach Arron ----------

VIRTUSFOCUS - PARENT WEEKLY INSIGHT

Grace | Week 12 | April 20-26, 2026

1) WEEKLY OVERVIEW

This Week: Strong Week Grace had a strong week of consistent daily preparation. Her routine held across all seven days, and she carried the same standard into a week that included three game days. Late-season rhythm continues to look steady.

2) WHAT STOOD OUT THIS WEEK

Standout: Recognizing her own work What stood out is that Grace recognized the quality of her own practice in real time and named it without being asked. That kind of self-awareness about preparation takes weeks to develop and points to genuine growth in how she sees what she's doing.

3) HOW THEY SEE THEMSELVES

Self-View: Building Grace is feeling good about the work she's putting in. Her daily preparation is backing up that confidence in concrete ways.

4) EMOTIONAL WEIGHT THIS WEEK

Emotional Weight: Light Things felt steady this week emotionally. Grace processed a normal mix of competitive frustration without it carrying into the next day, which is healthy and consistent with where she is in her development.

5) CONFIDENCE CHECK

Confidence: Growing Grace's confidence is trending up, grounded in the daily preparation she's been building all season.

6) PATTERN TO NOTICE

Pattern: Focused on what she controls Grace is staying focused on her preparation, effort, and how she shows up, rather than on results or lineup decisions she can't control. That focus is the foundation of how she's been operating for weeks.

7) SOMETHING TO BE AWARE OF

Awareness: Something to Note This is the closing stretch of a long season, and the late-season weight is real. Grace is asking what comes next, which is normal at this point. Steady support and patience at home are exactly the right call right now.

8) GROWTH OVER TIME

Progress: Getting Consistent Grace has reached a real milestone in her development. She's moved from actively building her mental performance habits to demonstrating real consistency, week after week. That progression took twelve weeks of work.

9) OVERALL SIGNAL

Overall: Good Week (Green) Things are looking strong this week. Grace's preparation, focus, and consistency all lined up the way they have throughout this stretch of the season.

- Coach Arron

ATHLETE B - BASELINE PROFILE

Sport: Division II Men's Track & Field Position: Throws (Shot Put, Weight Throw) Years Competing: 16 Mental Game Rating: 7/10 (athlete self-assessed at intake)

---

1. PERFORMANCE CONTEXT

Athlete B is a thrower (Shot Put, Weight Throw) at the Division II collegiate level, with 16 years in Track & Field, making him the most experienced athlete currently in the pipeline. His 7/10 mental game self-rating reflects high self-awareness with an identified gap in consistency and mistake-handling. He balances a full academic load, a work role involving coaching other athletes, and a competitive season that spans both indoor and outdoor Track & Field.

---

2. PRIMARY STATED GOALS

Outcome Goals:

- Finish top 5 at the conference championship.
- Qualify for nationals in Shot Put.
- Graduate undergrad and transition into grad school.
- Complete internship successfully.

Behavior Goals:

- Grow overall consistency across sport and other areas of life.
- Develop advanced mental training and preparedness.
- Improve goal-setting discipline.

---

3. MOTIVATION DRIVERS

Internal Drivers:

- Multi-domain self-improvement, seeks growth as a competitor, student, professional, and person simultaneously.
- Aspiration toward resilience and tenacity as character traits, not just sport attributes.

External Drivers:

- Conference championship placement and nationals qualification as concrete competitive benchmarks.
- Grad school transition as a near-term life milestone.

Identity Language Detected:

- "a more goal oriented, resilient, tenacious, and sharp human being", identity aspiration framed broadly across life domains, not confined to sport.

- Pre-moment self-talk is approach-framed and energized:

> "Let's go get this! Time to lock in! Go big now, come on!"

---

4. KNOWN DERAILERS

Primary Derailers:

- Multi-domain demand overload, school, work, and sport competing for time and energy create consistency breakdowns.
- Handling mistakes during competition, selected as a primary mental struggle.
- Staying consistent, selected as a primary mental struggle, self-identified as the area most needing development.

Derailer Context:

- His holding-back pattern is structural rather than psychological: "Just being busy with school and work related stuff that takes up a lot of my time." When external demands stack, sport consistency erodes first.

---

5. CONFIDENCE PATTERN

Confidence Type: Preparation-activated

Description: His confidence appears tied to preparation quality and competitive readiness rather than outcomes alone. His pre-performance self-talk is energized and approach-framed, suggesting a confident baseline when conditions are right. His 7/10 self-rating and selection of only two mental struggles indicate a competitor who trusts his abilities but recognizes specific edges needing refinement. Confidence likely dips when external factors (time pressure, multi-domain load) prevent the preparation standard he expects of himself.

---

6. IDENTITY FRICTION

Friction Points:

- Wants consistency across all life domains but recognizes that busyness with school and work disrupts sport routines.
- Wants to handle mistakes better but identifies this as a current gap rather than a resolved pattern.
- Aspires to be "sharp" and goal-oriented but faces structural time conflicts that force trade-offs between competing priorities.

---

7. STRESS / TRIGGER PROFILE

Competitive Pressure:

- Competes at the conference level with nationals aspirations, high internal expectations paired with the structural challenge of being a solo thrower at meets (no throwing teammates or throws coach present at competitions).

Primary Trigger:

- Multi-domain overload, when academic deadlines, work responsibilities, and competition schedules overlap, preparation quality suffers and consistency drops.

Behavioral Response Pattern:

- Approach-framed under pressure, pre-performance language is activation-oriented, not avoidance-oriented.
- When overwhelmed, appears to deprioritize sport recovery and practice rather than disengage entirely.

External Stressors:

- School workload (particularly on demanding days).
- Work schedule and coaching responsibilities.
- Spouse relationship (generally positive, occasional stress).

---

8. INITIAL COACHING EMPHASIS

Coaching Priorities:

- Build structured consistency habits that hold when multi-domain demands increase, consistency under load is the primary development area.
- Develop a mistake-handling framework for competitive moments, shift from reactive frustration to controlled reset.
- Leverage his strong approach-framed mindset as a foundation for competition preparation routines.
- Use his multi-domain identity as a coaching asset, not a limitation, his breadth of commitment reflects discipline, not distraction.

Baseline Anchors (locked, traced through every weekly output):

Identity Claim: Becoming a more goal-oriented, resilient, tenacious, and sharp human being across sport and life.

Hinge Habit: Approach-framed pre-performance activation and daily training consistency maintained through multi-domain demands.

Primary Derailer: Consistency disruption when school, work, and sport demands compete for time and energy.

Why It Matters: His multi-domain load is permanent, he will always be balancing sport, academics, work, and relationships. Building consistency systems that hold under pressure is the lever that unlocks his competitive ceiling.

Exact Phrase (verbatim from intake): "How to be a more goal oriented, resilient, tenacious, and sharp human being."

---

9. INITIAL GROWTH PHASE

Growth Phase: Developing

Justification: He demonstrates high commitment (All-in), strong self-awareness (7/10 with accurate identification of consistency and mistake-handling as his primary gaps), and an approach-framed competitive mindset. His 16 years of

experience provide a mature foundation. However, consistency remains self-identified as the primary area needing development, and mistake-handling during competition is an unresolved pattern. These gaps prevent advancement to Consistent despite his experience and engagement level.

CONFIDENTIAL UNDER NDA

ATHLETE B — D2 MEN'S TRACK AND FIELD THROWS

10-Week Coaching Arc | Athlete B — Progression Visual | Feb 2 – Apr 26, 2026

CONFIDENTIAL — NDA APPLIES

PHASE TRAJECTORY

Developing → Consistent (advancement at Wk 10 — final week of athlete's collegiate career after 16 years in T&F)

WEEKLY TIER (1 Mixed week, 9 Growth)

9 of 10 weeks Growth. Wk 8 = first Mixed week of program (Mt Union setback under severe weather + facility loss). 60 Win / 9 Neutral / 2 Missed across 70 program days.

KEY INFLECTION POINTS

Wk 1 Illness recovery + approach-framed re-engagement. Returns to competition. Category-only WTD scoring.

Wk 2 Near-PR Shotput (16.44m vs 16.70m career best) at highest-level meet of season. Solo at the meet — composure held in isolation.

Wk 3 First Gold Streak. Won both events. Identity-level achievement.

Wk 4 PSAC championship retrospective after 2.5-week gap. MODERATE EI. Partially Aligned. Multi-domain overload derailer activated under championship pressure. Outdoor transition begins.

Wk 5 SHIPPENSBURG BREAKTHROUGH — best outdoor opener of career. All PSAC auto-qualifiers hit. 7/7 Win — second Gold Streak. PSAC lesson named in athlete's own words:

> *"properly planned, not spontaneous."*

Wk 6 First Missed day in 42 program days (Friday illness). CMU meet cancelled. Only 1 practice in 7 days. Moderate recommitment (lifted Saturday while sick). Reframed the disruption:

> *"a blessing"*

Wk 7 Easter break recovery week executed to stated intention. 7/7 Win — third Gold Streak. Bullseye center-ring expanded 1 → 6 items. Achievement internal:

> *"mental stability and equilibrium."*

Wk 8 FIRST MIXED WEEK in program. Mt Union 2-day meet under severe weather. Marks below standard across all three events. Practice facility permanently lost. Strongest negative language to date — but weekday execution held, athlete competed through.

Wk 9 SLIPPERY ROCK PROGRAM-BEST. Outdoor shot put school record (over 16m). New Discus PR. 7/7 Win — fourth Gold Streak. Preparation-quality system VALIDATED A SECOND TIME, this time under MORE constrained conditions. Athlete's own summary:

> *"best meet of the season."*

Wk 10 ↑ PHASE ADVANCEMENT to Consistent — final week of collegiate career. Two real-time strategic decisions named in athlete's own voice:

> *"I didn't need to be there but I chose to to support my team and to keep my competition readiness up."*
>
> *"leave colligate sports with gratitude, reverence, and peace."*

INTAKE → CURRENT

FROM: multi-domain overload derailer. TO: preparation-system mastery across three timescales — retrospective lesson extraction (Wk 4), prospective design (Wks 5, 9), in-competition real-time decisions (Wk 10).

VIRTUSFOCUS: ATHLETE COACHING MESSAGE

Angelo Allen | Week 10 | April 20-26, 2026 ----------

Angelo,

Saturday at the last-chance meet, you'd already won shot put and discus. The next event was hammer, and the ring was slippery. You scratched. You wrote exactly why: "to save myself for PSAC championship next week." That's the sentence that earned my attention this week.

That was preparation, made inside the meet itself, with the championship one week out. The Slippery Rock pattern from last week showed up again here, but at a different level. Last week you made preparation decisions before the meet. This week you made one inside it.

The meet itself, you didn't need to be at. You wrote that too, and you went anyway: to support your team and to keep your competition readiness up. Two strategic decisions in one Saturday, both yours, both named in your own voice. Built off what was learned last week, exactly like you said you would.

Then I read your goal for next week. "To leave colligate sports with gratitude, reverence, and peace. After 16 years of being in Track and Field." That is a senior writing the meaning of his last meet before throwing it. You're already there, Angelo. Before you even leave for Shippensburg.

Ten weeks ago, you came back from PSAC disappointment with a question about what preparation actually requires. You answered it three times. At Shippensburg in April. At Slippery Rock last week. At the last-chance meet on Saturday. Thursday is the fourth answer.

YOUR ACTION: BEFORE EACH PSAC EVENT

For each of the three PSAC days (Thursday hammer, Friday discus, Saturday shot put), name the day's individual intention before warmup. One sentence each. Source it from the language you already wrote: humility, preparation, determination, readiness, gratitude, reverence, peace. What you want to bring to that specific day.

Sixteen years. Three intentions. Throw them the way you wrote them.

Coach Arron

NEXT WEEK FOCUS QUESTION

You wrote what you want PSACs to be in your own words: humility, preparation, determination, readiness, gratitude, reverence, peace. Of those seven, which one do you most want to carry into Thursday's hammer warmup?

ATHLETE C - BASELINE PROFILE

Sport: High School Wrestling Years Competing: 10 Mental Game Rating: 8/10 (athlete self-assessed at intake)

---

1. PERFORMANCE CONTEXT

Athlete C is a high school wrestler with 10 years of competitive experience. The intake was completed during recovery from a season-ending knee injury sustained in the state semi-finals (PCL and LCL rupture, surgery, active rehabilitation). He forfeited remaining tournament matches and finished sixth in the state. He rates his current mental game at 8/10 and identified 4 mental struggle categories: Pressure, Fear of failure, Pre-game nerves, and Staying consistent.

The competitive environment is individual sport at a state-level competitive standard. Performance demands center on high-stakes moments where mistakes are immediately visible and cannot be distributed across a team. The injury context adds a return-to-sport progression as a parallel preparation demand alongside ordinary competitive readiness.

---

2. PRIMARY STATED GOALS

Outcome Goals:

- Be the best
- "Nothing but up"

Behavior Goals:

- Build confidence
- Build belief
- Thrive under pressure

Long-term framing is championship-oriented ("I want to be the best") paired with development goals centered on belief in himself and composure under pressure. Stated hopes from the program are "the ability to be great" and "the ability to thrive under pressure", coaching outcomes he sees as distinct from baseline competence.

---

3. MOTIVATION DRIVERS

His motivation is identity-driven and grounded in a self-image as a top competitor. His pre-performance thought pattern centers on accumulated preparation: "Think about the amount of work I put in leading up to the moment", an approach-framed mental anchor that points to a healthy hinge habit when activated.

Family support is high (parents rated very involved). No current mindset coach or mentor. Commitment level is self-reported as maximum ("All-in, let's go").

---

4. KNOWN DERAILERS

Four interconnected friction points:

- Pressure response in high-stakes moments
- Fear of failure expressed as outcome attachment ("the outcome of maybe losing")
- Pre-game nerves
- Staying consistent across competitive situations

His holding-back response names the central pattern: when the pre-performance frame shifts from his work-anchored process to outcome focus, fear-of-loss thinking takes over. This is an approach-vs-avoidance tension, with the work-anchored thought pattern as the approach side and "the outcome of maybe losing" as the avoidance side. The 8/10 self-rating suggests this activates less frequently than for program peers, but the pattern is named clearly.

---

5. CONFIDENCE PATTERN

Confidence is moderate-to-high in self-assessment (8/10) and grounded in 10 years of accumulated wrestling experience. The work-anchored pre-performance thought pattern indicates confidence has a process foundation when activated correctly. Listing "Confidence" and "Belief" as mindset goals signals that baseline confidence is present but trust in himself under pressure is a development edge, not a settled trait.

---

6. IDENTITY FRICTION

He expresses a clear aspirational identity ("I want to be the best") alongside named development gaps in confidence, belief, and pressure response. The friction is between the competitor he wants to be and the still-developing trust in his own preparation under high-stakes conditions.

The injury layer adds a current-state friction: returning from major knee surgery introduces a gap between past competitive identity and present rehabilitation reality. His framing of recovery, "Nothing but up", positions the process as forward trajectory rather than setback, but the gap between past competitive standing and current physical state is real.

---

7. STRESS / TRIGGER PROFILE

Competitive Pressure:

- High-stakes individual competition; no team buffer for mistakes
- State-level competitive context (top-six finisher prior to injury)

Self-Imposed Pressure:

- "Be the best" framing creates internal performance demand

- Fear-of-loss outcome attachment activates under pressure

External Context:

- Parents very involved, high family investment in the performance journey

Recovery Context:

- Active rehabilitation from knee surgery
- Return-to-sport progression introduces an additional pressure layer (re-establishing competitive identity)

---

8. INITIAL COACHING EMPHASIS

Coaching Priorities:

- Reinforce the work-anchored pre-performance thought pattern as a deliberate routine, not an occasional resort.
- Translate "the outcome of maybe losing" into named, controllable preparation moves.
- Build belief through evidence collection, rehab milestones, technical progress, accumulated reps as capability proof.
- Establish consistency anchors that hold across pressure conditions, not just ordinary competition.
- Frame recovery progression as competitive identity development, not a pause.

Baseline Anchors (locked, traced through every weekly output):

Identity Claim: Wants to be a wrestler who performs at his best under pressure, anchored in belief and confidence.

Hinge Habit: Pre-performance anchoring to accumulated preparation rather than outcome focus.

Primary Derailer: Pressure response activated by fear-of-loss thinking in high-stakes competitive moments.

Why It Matters: The shift from work-anchored confidence to outcome-fear is the exact gap between the competitor he wants to become and the pressure response that currently shows up in big moments.

Exact Phrase (verbatim from intake): "Think about the amount of work I put in leading up to the moment"

---

9. INITIAL GROWTH PHASE

Growth Phase: Developing

Justification: He brings 10 years of competitive experience, high commitment ("all-in"), and a moderate-to-high self-assessed mental game (8/10). He has named clear development goals (confidence, belief, thriving under pressure) and articulated a functional pre-performance anchor in his own words. Free-text responses are brief and broad, indicating the self-awareness is present but not deeply articulated. Combined with active recovery from a major injury at intake time, this positions him in Developing, with strong building blocks already in place and execution consistency under pressure as the development edge.

VIRTUSFOCUS: PARENT COACHING MESSAGE

Hunter | Week 1 | April 20-26, 2026 ----------

WEEKLY CONTEXT

Hunter is back in the program after time away during recovery, and this week was about re-establishing the daily rhythm that healing depends on. He stayed consistent across all seven days with his physical therapy, compression work, and stretching routine. The work was steady and process-oriented.

WHAT STOOD OUT

What stood out this week was the wrestling banquet, where Hunter received the Wrestler of the Year award for the season. Equally important is the way he set his goal for the week, framed around small daily improvements with healing as the priority. That mindset is the right fit for the phase he's in.

WHAT'S AHEAD

With no competition on the schedule, the focus heading into the coming weeks is on continuing the daily recovery work and connecting to what each day adds to his return readiness. Steady rehab work now is what builds the foundation for the next time he steps onto the mat.

HOW YOU CAN SUPPORT

Encouraging the process and being available if Hunter wants to talk about how the recovery is going is the most helpful support right now. The Wrestler of the Year recognition is a meaningful milestone. Celebrate it for what it is, without making it the standard he has to live up to next.

Coach Arron

Team: VirtusFocus Validation Program Week: Cross-Temporal Validation (Most Recent Week Per Athlete) Report Type: Weekly Team Snapshot Classification: Informational Only Athletes Included: 6

> "These indicators are informational only and may not be used as a basis for participation, selection, or disciplinary decisions."

NOTE: This is a validation snapshot using each athlete's most recent week of data. Athletes span different date ranges (May 2025 through March 2026) and represent different sports and institutions. This tests the T1-T7 aggregation format and logic, not temporal alignment. In production, all athletes on a team would share the same reporting week.

T1) PERFORMANCE DISTRIBUTION

```
Growth:  3/6  (50%)
Mixed:   3/6  (50%)
Reset:   0/6  (0%)
Directional Momentum: → Stable
```

The roster is evenly split between Growth-tier and Mixed-tier performance this period, with no athletes in Reset. All six athletes show stable directional momentum in their weekly tier trends, indicating a steady performance foundation across the program. The absence of Reset-tier athletes and the balanced Growth-Mixed distribution suggest a cohort maintaining behavioral engagement without significant regression.

T2) TEAM CONSISTENCY SIGNAL

```
Overall Status: Transitional Variability
Stable:    2/6  (33%)
Variable:  4/6  (67%)
Determination: Axis 1 (Distribution) = 67% Variable, 0%
Volatile. Axis 2 (Trend Direction) = all 6 athletes show
Stable weekly tier trends. → Transitional Variability
(>40% Variable, zero Volatile, all trends Stable).
```

Two-thirds of athletes show variable consistency patterns this period, while one-third demonstrate stable positive consistency. The variability is context-driven — athletes in variable patterns are navigating competitive transitions, structural changes, or post-competition processing. No athletes show volatile or deteriorating consistency signals.

T3) TEAM FOCUS DISTRIBUTION

```
Center-Dominant:     6/6  (100%)
Mixed Focus:         0/6  (0%)
Outer-Ring Drift:    0/6  (0%)
```

All six athletes demonstrate center-dominant controllable alignment, directing attention toward preparation, effort, and response patterns rather than external factors. This indicates strong collective focus on elements within individual control across the entire roster.

T4) TEAM RECOMMITMENT TREND

```
Strong:                  0/6  (0%)
Moderate:                0/6  (0%)
Low:                     0/6  (0%)
Not Applicable:          6/6  (100%)
```

The majority of athletes did not experience adverse execution events requiring recovery this period. A 100% Not Applicable rate indicates that the roster maintained sufficient daily engagement to avoid triggering recommitment assessment. This reflects stable behavioral patterns rather than a data gap.

T5) TEAM CONFIDENCE DIRECTION

```
Building:     1/6  (17%)
Stable:       4/6  (67%)
Rebuilding:   1/6  (17%)
Overall Trend: → Stable
```

The majority of athletes show stable confidence trajectories linked to consistent preparation patterns. One athlete demonstrates building confidence through successful preparation-to-performance transfer, while one is in a rebuilding phase following a competitive transition period. No athletes show declining or variable confidence signals.

T6) TEAM STRESS LOAD DISTRIBUTION

```
Low:       3/6  (50%)
Moderate:  3/6  (50%)
Elevated:  0/6  (0%)
```

The roster is evenly split between low and moderate stress loads, with no athletes at elevated levels. The moderate stress indicators reflect competitive schedules and developmental transitions rather than acute distress. The absence of elevated stress across the program suggests a manageable collective load.

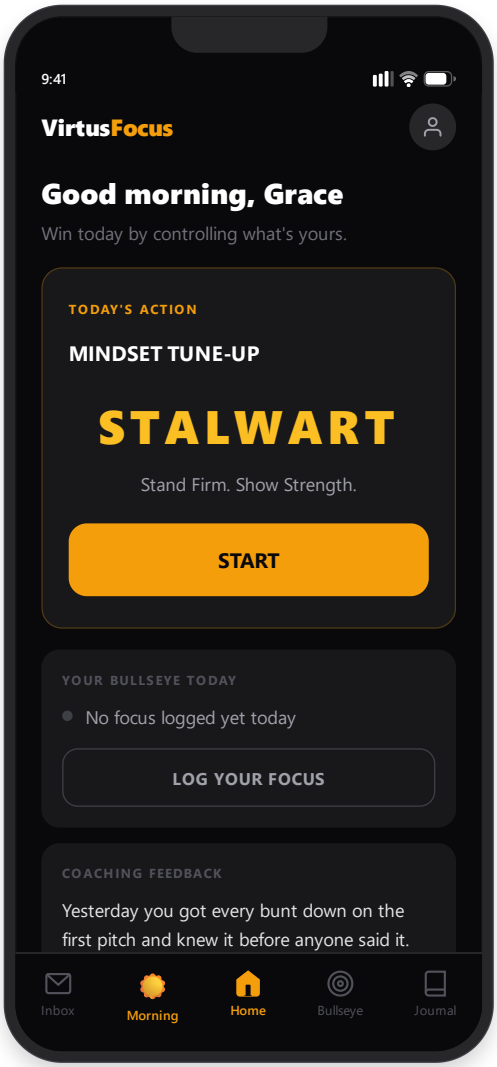
T7) TEAM DEVELOPMENTAL DISTRIBUTION

```
Emerging:    0/6  (0%)
Developing:  5/6  (83%)
Consistent:  1/6  (17%)
Leadership:  0/6  (0%)
Team Composite Readiness Distribution:
↑ Positive (Green):    0/6  (0%)
→ Steady (Yellow):     6/6  (100%)
↓ Attention (Orange):  0/6  (0%)
```

The program is predominantly in the Developing phase, with one athlete having advanced to the Consistent phase. This distribution is expected for a cohort in an active growth cycle. All six athletes show Steady readiness indicators, reflecting a stable foundation without athletes requiring immediate attention. The uniform readiness signal indicates the cohort is collectively maintaining engagement and behavioral patterns at a sustainable level, with no athletes flagged for coaching intervention.

Home (Morning)

8:12 AM, daily entry point



WHAT YOU'RE LOOKING AT

The athlete's daily entry point. The Focus Word ('STALWART') is pre-generated coaching content the athlete reads, not creates. The Mindset Tune-Up CTA is the one required ritual for the day. Bullseye and Coaching Feedback are secondary cards, always present, always glanceable. The Coaching Feedback preview shows the most recent message from Coach Arron in the athlete's Inbox.

FOR THE BREAKOUT

Is '30 seconds in the morning, anchored to a single word' something an athlete actually opens, or another notification they'd bury? What positioning makes this feel essential rather than optional?

Mindset Tune-Up (Active)

Active first interaction of the day

WHAT YOU'RE LOOKING AT

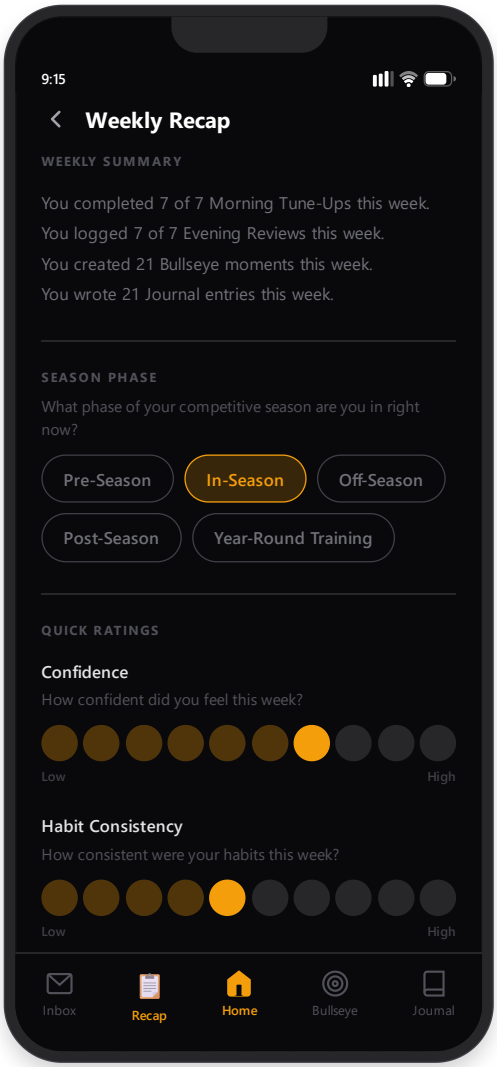
The Morning Mindset Tune-Up frames the day. Focus Word, performance prompt, mindset challenge to accept or decline, and an intention. Total time: roughly 30 seconds. This is the only daily input the athlete is asked to complete, and the anchor that everything else builds from.

FOR THE BREAKOUT

At what price point does a 30-second daily ritual feel high-value to your athletes or coaching staff? What kills compliance: too long, too short, too generic, or wrong moment of the day?

Weekly Recap (Active)

Sunday evening, closes the week



WHAT YOU'RE LOOKING AT

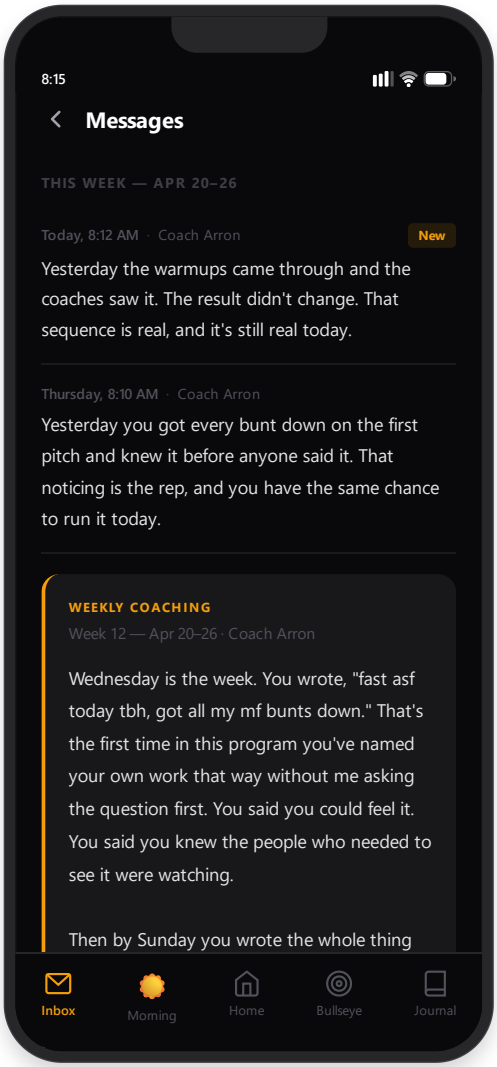
The five-question recap that closes the week. Stats at the top show how the week went. Quick ratings and the Forward Anchor are the gate. Submitting fires the AI pipeline that produces the Weekly Coaching Message and Deep Dive that arrive in the athlete's Inbox shortly after.

FOR THE BREAKOUT

Is Sunday evening the right ask? What would have to be true about the institutional environment, or the athlete's own incentive structure, for this to get done weekly without becoming a chore?

Inbox (Feed)

Where coaching lands



WHAT YOU'RE LOOKING AT

Two coaching streams in one feed. Daily snippets at the top (yesterday-to-today bridge, roughly thirty words, Coach Arron voice). The Weekly Coaching Message (amber-bordered card) is the substantive output, and the message in the athlete's packet is exactly this card. The Deep Dive preview leads to long-form analysis. Same coach voice across both cadences.

FOR THE BREAKOUT

Is this the right artifact set for an athlete? Would your coaching staff want their own institutional view of the same data? Is the daily cadence 'right' or noise?
